Pariselle A. & Euzet L. 2009. — Systematic revision of dactylogyridean parasites (Monogenea) from cichlid fishes in Africa, the Levant and Madagascar. *Zoosystème* 31 (4): 849-898.

ABSTRACT

Systematic revision is made of the six dactylogyridean genera (Monogenea) described on African, Levantine and Malagasy cichlid fishes: *Urogyrus* Bilong Bilong, Birgi & Euzet, 1994 (including one species); *Enterogyrus* Paperna, 1963 (including eight species); *Insulacleidus* Rakotofiringa & Euzet, 1983 (including three species); *Onchobdella* Paperna, 1968 (including eight species); *Scutogyrus* Pariselle & Euzet, 1995 (including six species) and *Cichlidogyrus* Paperna, 1960 (including 71 species). Validities of species are discussed. Diagnoses and illustrated determination keys are given for all taxa.

RÉSUMÉ

Révision systématique des Monogènes Dactylogyridéa parasites de poissons Cichlidae en Afrique, au Proche-Orient et à Madagascar.

Les auteurs font la révision systématique des six genres de Monogènes Dactylogyridéa connus pour être parasites des poissons Cichlidae en Afrique, au Proche-Orient et à Madagascar: *Urogyrus* Bilong Bilong, Birgi & Euzet, 1994 (comprenant une espèce); *Enterogyrus* Paperna, 1963 (comprenant huit espèces); *Insulacleidus* Rakotofiringa & Euzet, 1983 (comprenant trois espèces); *Onchobdella* Paperna, 1968 (comprenant huit espèces); *Scutogyrus* Pariselle & Euzet, 1995 (comprenant six espèces) et *Cichlidogyrus* Paperna, 1960 (comprenant 71 espèces). La validité de toutes les espèces est discutée. Les diagnoses et des clés d'identification illustrées sont données pour tous les taxons.

KEY WORDS
Monogenea,
Dactylogyridae,
Urogyridae,
Ancyrocephalidae,
Cichlidae,
Africa,
Levant,
Madagascar.

MOTS CLÉS

Urogyridae,
Ancyrocephalidae,
Cichlidae,
Afrique,
Proche-Orient,
Madagascar.

INTRODUCTION

Today six genera, belonging to Dactylogyridea Bychowsky, 1937, have been proposed on African, Levantine and Malagasy cichlids (due to the specificity of Monogenea, the description of a new *Quadriacanthus* species [genus originally described from Siluriformes] from a tilapiine host by Paperna [1973] – i.e. *Q. tilapiae* from *Oreochromis esculentus* (Graham, 1928) – in the Victoria Lake is indubitably the result of a sampling error [mix of samples or contamination]. *Oreochromogyrus mymensinghi* described from Bangladesh by Ferdousi & Chandra [2002] on introduced *Oreochromis niloticus*, has to be considerer as *nomen inquirenda* because the description of this new genus and new species is based on the misidentification of *Cichlidogyrus* larvae: one Urogyridae Bilong Bilong, Birgi & Euzet, 1994 (*Urogyrus* Bilong Bilong, Birgi & Euzet, 1994) and five Ancyrocephalidae Bychowsky, 1937 (*Enterogyrus* Paperna, 1963; *Insulacleidus* Rakotofirina & Euzet, 1983; *Onchobdella* Paperna, 1968; *Scutogyrus* Pariselle & Euzet, 1995 and *Cichlidogyrus* Paperna, 1960). The large number of species described (especially in *Cichlidogyrus*), the lack of revision (except Price 1967; Paperna 1979 or Pariselle 1996) or of determination keys, and newly acquired genetic data (see Pouyaud *et al.* 2006), lead us to undertake a systematic revision of dactylogyridean parasites from cichlid fishes of these regions.

MATERIAL AND METHODS

Terminology used is that of Pariselle & Euzet (1995c): uncinulus instead of hooklets; for large hooks, as “gripus” has not been accepted by parasitologists, we will use “anchor” instead of “hamulus”, because this term is close to the Latin *anchora*, and describes well the working of these haptoral sclerites (see Lim *et al.* 2001).

Host species validities and spellings are given according to FishBase (Froese & Pauly 2009): www. fishbase.net.

SYSTEMATICS

Family UROGYRIDAE

Bilong Bilong, Birgi & Euzet, 1994

Genus *Urogyrus*

Bilong Bilong, Birgi & Euzet, 1994

TYPE AND ONLY SPECIES. — *Urogyrus cichlidarum* Bilong Bilong, Birgi & Euzet, 1994, by original designation.

DIAGNOSIS. — Urogyridae. Four pairs of cephalic glands. Two pairs of ocellae with lenses. Intestinal caeca without diverticula, joined posteriorly. One pair of ventral anchors; right anchor abortive. One transverse bar (ventral). Fourteen ventral uncinuli. Very large testis, median, inter-caecal. Vas deferens encircling left intestinal caeca. Seminal vesicle present. One prostatic reservoir. Male copulatory complex with penis and accessory piece in two parts forming pincer shape. Ovary on the anterior right side of testis. Straight vagina with dextrolateral opening. Parasite in the urinary bladder of African cichlids.

Urogyrus cichlidarum

Bilong Bilong, Birgi & Euzet, 1994

Urogyrus cichlidarum Bilong Bilong, Birgi & Euzet, 1994: 562–564, figs 1–3.

TYPE MATERIAL. — Holotype: MNHN 114 HF Tk11. Paratype: MNHN 115 HF Tk12.

TYPE HOST. — *Benitochromis batesii* (Boulenger, 1901) (first species cited by Bilong Bilong *et al.* [1994]).

TYPE LOCALITY. — Mbila, Nyong Basin, Cameroon.

ADDITIONAL HOSTS. — *Parananochromis caudifasciatus* (Boulenger, 1913); *Pungu maclareni* (Trewavas, 1962); *Stomatepia pindu* Trewavas, Green & Corbet, 1972; and *Tilapia* sp.

SITE. — Urinary bladder.

ADDITIONAL LOCALITIES. — Batouri, Kadei Basin, Cameroon on *Parananochromis caudifasciatus*; Barombi M’Bo Lake, Cameroon on *Pungu maclareni* and *Stomatepia pindu*; Sangmelima, Lobo River, Cameroon on *Tilapia* sp.

Family ANCYROCEPHALIDAE Bychowsky, 1937

Genus *Enterogyrus* Paperna, 1963

TYPE SPECIES. — *Enterogyrus cichlidarum* Paperna, 1963, by original designation.

OTHER SPECIES INCLUDED. — *Enterogyrus amieti* Bilong Bilong, Euzet & Birgi, 1996; *E. barombiensis* Bilong Bilong, Birgi & Euzet, 1991; *E. coronatus* Pariselle, Lambert & Euzet, 1991; *E. crassus* Bilong Bilong, Birgi & Euzet, 1996; *E. foratus* Pariselle, Lambert & Euzet, 1991; *E. malnbergi* Bilong Bilong, 1988; *E. melenensis* Bilong Bilong, Birgi & Lambert, 1989.

DIAGNOSIS. — Ancyrocephalidae. Pear-shaped body enlarged posteriorly; thick tegument transversely striated (except on haptor). Four ocellae, members of anterior pair wider apart and smaller than those of posterior, anterior with or without lenses. Pharynx muscular; short oesophagus followed by two lateral intestinal caeca without diverticula, joined posteriorly. Haptor cup-shaped, opening ventrally or in two parts: one bulbous and one peduncular shaped. Two unequal pairs of anchors. One ventral transverse bar, straight or V-shaped. Fourteen equal uncini, each with points orientated ventrally (haptor cup-shaped) or anteriorly (haptor bulbous and peduncular shaped). Testis at level of junction of intestinal caeca. Vas deferens encircling left intestinal caeca, widening to form a seminal vesicle, continuing as narrow duct to base of penis. Sub-median tubular and spirally coiled (clockwise) penis, enlarged at base; accessory piece absent. Ovary median pre-testicular, ovoid, sometimes U-shaped. Vagina not observed. Stomach parasite of Levantine and African cichlid fishes.

REMARKS

Two species are not considered in this study because they were described from the stomach of *Etroplus suratensis* (Block, 1790) in Asia. These species (*Enterogyrus globodiscus* (Kulkarni, 1969) and *E. papernai* Gussev & Fernando, 1973) are characterised by having two transverse bars (vs. only one for African and Levantine species), according to Paperna (1979) we think that this difference will be sufficient to justify splitting *Enterogyrus* into two genera.

Enterogyrus cichlidarum Paperna, 1963

Enterogyrus cichlidarum Paperna, 1963: 183–186, figs 1–3. — Bilong Bilong *et al.* 1989: 104, figs 4, 5.

Enterogyrus niloticus Eid & Negm, 1987: 79–84, figs 1–4. — Khidr 1990: 741, 742.

TYPE MATERIAL. — Holotype: Hebrew University, Department of Parasitology, no specified number.

TYPE HOST. — Of *E. cichlidarum*: *Tilapia zillii* (Gervais, 1848) (first species cited by Paperna [1963]).

Of *E. niloticus*: *Oreochromis niloticus* (Linnaeus, 1758).

TYPE LOCALITY. — Of *E. cichlidarum*: Rubin River, Israel.

Of *E. niloticus*: Barber Mouise, Nile River, Egypt.

ADDITIONAL HOSTS. — *Sarotherodon galilaeus sanagaensis* (Thys van den Audenaerde, 1966) and *Tilapia nyongana* Thys van den Audenaerde, 1971 (Bilong Bilong *et al.* 1996).

SITE. — Stomach.

ADDITIONAL LOCALITIES. — Jordan and coastal systems, Israel (Paperna 1979); South of Cameroon on *O. niloticus* (Bilong Bilong *et al.* 1989); Sakbayémé, Sanaga Basin, Cameroon on *Sarotherodon galilaeus sanagaensis* and So'o, Nyong Basin, Cameroon on *Tilapia nyongana* (Bilong Bilong *et al.* 1996).

REMARKS

The comparison by Khidr (1990) of *Enterogyrus* species specimens from *Tilapia zillii* and *Oreochromis niloticus* in Egypt revealed no differences and led this author to synonymise *E. niloticus* with *E. cichlidarum*.

Enterogyrus amieti

Bilong Bilong, Euzet & Birgi, 1996

Enterogyrus amieti Bilong Bilong, Euzet & Birgi, 1996: 38, 39, figs 4, 5.

TYPE MATERIAL. — Holotype: MNHN 473 HF Tg72. Paratype: MRAC 37.362.

TYPE HOST. — *Sarotherodon galilaeus sanagaensis* (Thys van den Audenaerde, 1966).

TYPE LOCALITY. — Sakbayémé, Sanaga Basin, Cameroon.

SITE. — Stomach.

Enterogyrus barombiensis

Bilong Bilong, Birgi & Euzet, 1991

Enterogyrus barombiensis Bilong Bilong, Birgi & Euzet, 1991: 105, 106, figs 2, 3.

TYPE MATERIAL. — Holotype: MNHN 111HF Tk7. Paratype: MNHN 112HF Tk8.

TYPE HOST. — *Pungu maclareni* (Trewavas, 1962).

ADDITIONAL HOSTS. — *Stomatepia pindu* Trewavas, 1972, *Konia eisentrauti* (Trewavas, 1962).

TYPE LOCALITY. — Barombi Mbo Crater Lake, Cameroon.

SITE. — Stomach.

Enterogyrus coronatus

Pariselle, Lambert & Euzet, 1991

Enterogyrus coronatus Pariselle, Lambert & Euzet, 1991: 213–216, figs 1D₂, 4, 5A.

TYPE MATERIAL. — Holotype: MNHN 89 HF Tk1. Paratypes: MNHN 89 HF Tk2; BMNH 1990.12.7.2.

TYPE HOST. — *Tilapia guineensis* (Bleeker, 1862).

TYPE LOCALITY. — Layo station, Ebrié Lagoon, Côte d'Ivoire.

SITE. — Stomach.

TYPE LOCALITY. — Mouth of the Casamance River, Senegal.

ADDITIONAL HOST. — *Sarotherodon melanotheron melanotheron* Rüppell, 1852.

SITE. — Stomach.

ADDITIONAL LOCALITY. — Layo station, Ebrié Lagoon, Côte d'Ivoire.

Enterogyrus malmbergi Bilong Bilong, 1988

Enterogyrus malmbergi Bilong Bilong, 1988: 52, 53, figs 1, 2.

TYPE MATERIAL. — No type material mentioned in the original description.

TYPE HOST. — *Oreochromis niloticus* (Linnaeus, 1758).

TYPE LOCALITY. — Edebda, Sanaga River, Cameroon.

SITE. — Stomach.

Enterogyrus melenensis

Bilong Bilong, Birgi & Lambert, 1989

Enterogyrus melenensis Bilong Bilong, Birgi & Lambert, 1989: 101–104, figs 2, 3.

TYPE MATERIAL. — Holotype: MRAC 37.226. Paratype: MRAC 37.227.

TYPE HOST. — *Hemichromis fasciatus* Peters, 1857.

TYPE LOCALITY. — Melen, Yaoundé, Cameroon.

SITE. — Stomach.

ADDITIONAL LOCALITIES. — Nyong, Sanaga and Lobé Basins, Cameroun.

Enterogyrus foratus

Pariselle, Lambert & Euzet, 1991

Enterogyrus foratus Pariselle, Lambert & Euzet, 1991: 212, 213, figs 1A, 1D₁, 2, 5B.

TYPE MATERIAL. — Holotype: MNHN 90 HF Tk3. Paratypes: MNHN 90 HF Tk4; BMNH 1990.12.7.1.

TYPE HOST. — *Sarotherodon melanotheron heudelotii* (Duméril, 1859).

“*Enterogyrus hemihaplochromii*”

“*Enterogyrus hemihaplochromii*” — Bender 1979.

TYPE MATERIAL. — No type material mentioned in the original description.

HOST. — *Pseudocrenilabrus multicolor* Schoeller, 1903.

SITE. — Stomach.

LOCALITY. — East Africa.

REMARKS

"Enterogyrus hemihaplochromii" was described in an unpublished thesis; this name is then a *nomen nudum*.

Enterogyrus sp.

Enterogyrus sp. — Cone *et al.* 1987: 312, 313, figs 1, 2, 3.

HOST. — Captive *Pomacanthus paru* (Bloch, 1787).

LOCALITY. — Caribbean Sea.

SITE. — Foregut.

REMARKS

According to Pariselle *et al.* (1991) this species, due to its morphology and anatomy, does not belong to *Enterogyrus*, but rather to *Diplectanotrema* Johnston & Tiegs, 1922 or *Pseudempleurosoma* Yamaguti, 1965 which individuals are located in the pharynx of marine fishes.

Genus *Insulacleidus* Rakotofiringa & Euzet, 1983

TYPE SPECIES. — *Insulacleidus paratilapiae* Rakotofiringa & Euzet, 1983, by original designation.

OTHER SPECIES INCLUDED. — *Insulacleidus ptychochromidis* Rakotofiringa & Euzet, 1983 and *I. paretropli* Rakotofiringa & Euzet, 1983.

DIAGNOSIS. — Ancyrocephalidae. Three pairs of cephalic glands. Two pairs of ocellae. Intestinal caeca without diverticula, joined posteriorly. Two pairs of anchor, one dorsal and one ventral. Two transverse bars, one dorsal one ventral. Fourteen uncinuli. Testis median posterior to the body. Vas deferens encircling left intestinal caeca. Seminal vesicle present. One prostatic reservoir. Male copulatory complex with penis and accessory piece. Pre-testicular median ovary. Vagina with lateral dextral opening. Seminal receptacle present. Gill parasite on Malagasy cichlid fishes.

Insulacleidus paratilapiae

Rakotofiringa & Euzet, 1983

Insulacleidus paratilapiae Rakotofiringa & Euzet, 1983: 107–110, figs 1–4.

TYPE MATERIAL. — No type material mentioned in the original description.

TYPE HOST. — *Paratilapia polleni* Bleeker, 1868.

TYPE LOCALITY. — No type locality mentioned in the original description.

SITE. — Gills.

ADDITIONAL LOCALITIES. — Near Majunga, West of Madagascar; Katsepy and Ampizoroa Lakes, Madagascar; Périmet and Ivoloina aquaculture stations, Tamatave Province, Madagascar.

Insulacleidus paretropli
Rakotofiringa & Euzet, 1983

Insulacleidus paretropli Rakotofiringa & Euzet, 1983: 111, 112, figs 8–10.

TYPE MATERIAL. — No type material mentioned in the original description.

TYPE HOST. — *Paretreplus polyactis* Bleeker, 1878.

TYPE LOCALITY. — Ambila, Antananarivo, Madagascar.

SITE. — Gills.

Insulacleidus ptychochromidis
Rakotofiringa & Euzet, 1983

Insulacleidus ptychochromidis Rakotofiringa & Euzet, 1983: 110, 111, figs 5–7.

TYPE MATERIAL. — No type material mentioned in the original description.

TYPE HOST. — *Ptychochromis oligacanthus* (Bleeker, 1868).

TYPE LOCALITY. — Ambila, Lemaitro, Tamatave Province, Madagascar.

SITE. — Gills.

Genus *Onchobdella* Paperna, 1968

TYPE SPECIES. — *Onchobdella voltensis* Paperna, 1968, by original designation.

OTHER SPECIES INCLUDED. — *Onchobdella aframae* Paperna, 1968; *O. bopeleti* Bilong Bilong & Euzet, 1995; *O. krachii* Paperna, 1968; *O. melissa* Pariselle & Euzet,

1995; *O. pterigialis* Paperna, 1968; *O. silverai* Pariselle & Euzet, 1995; *O. spirocirra* Paperna, 1968.

DIAGNOSIS (according to Pariselle & Euzet [1995a]). — Ancyrocephalidae. Three pairs of cephalic glands. Two posterior ocellae with lenses, two small anterior ocellae. Intestinal caeca without diverticula, joined posteriorly. Two pairs of anchors: one large dorsal, one smaller ventral. Three transverse bars: one dorsal, two ventral well separated. Fourteen uncinuli of same length. Testis posterior inter-caecal. Vas deferens encircling left intestinal caeca. Seminal vesicle present. One prostatic reservoir. Male copulatory complex with penis and accessory piece. Median pre-testicular ovary. Vaginal opening lateral, dextral, sclerotised. Gill parasites on African cichlid fishes.

Onchobdella voltensis Paperna, 1968

Onchobdella voltensis Paperna, 1968: 201, fig. 1.

TYPE MATERIAL. — Holotype: BMNH 1968.9.4.5. Paratype: BMNH 1968.9.4.6.

TYPE HOST. — *Hemichromis fasciatus* Peters, 1857.

TYPE LOCALITY. — Afram sector, Volta Lake, Ghana.

ADDITIONAL HOST. — *Hemichromis bimaculatus* Gill, 1862.

SITE. — Gills.

ADDITIONAL LOCALITIES. — Kete Krachi, Volta Lake and Adutor Lagoon Volta River Delta, Ghana on *H. bimaculatus*; Benin and Cameroon on *Hemichromis fasciatus* (Dossou & Birgi, 1984); Senegal, Gambia, Mali and Côte d'Ivoire on *Hemichromis fasciatus* (Pariselle & Euzet 2004).

Onchobdella aframae Paperna, 1968

Onchobdella aframae Paperna, 1968: 205: fig. 4f-h.

TYPE MATERIAL. — Holotype: BMNH 1968.9.4.3.

TYPE HOST. — *Hemichromis fasciatus* Peters, 1857.

TYPE LOCALITY. — Afram sector, Volta Lake, Ghana.

SITE. — Gills.

ADDITIONAL LOCALITIES. — Benin and Cameroon (Dossou & Birgi 1984); Senegal, Gambia, Mali and Côte d'Ivoire (Pariselle & Euzet 2004).

REMARKS

Dossou (1973), in his PhD Thesis on the fish parasites from South Benin, re-described *O. aframae* and indicated a new host: *Pelmatolochromis caudifasciatus* Boulenger, 1913 (the species determination of this new host remains uncertain; in fact *Parananochromis caudifasciatus* (Boulenger, 1913) is limited to Southern Cameroon, the Northern part of the Congo and the Rio Muni; this distribution excludes the Benin rivers [see Froese & Pauly 2009]).

Onchobdella bopeleti

Bilong Bilong & Euzet, 1995

Onchobdella bopeleti Bilong Bilong & Euzet, 1995: 254-256, figs 2-4.

TYPE MATERIAL. — Holotype: MNHN 471 HF Tg71. Paratypes: MNHN 471 HF Tg71; BMNH 1994.5.5.4; MRAC 37.367 and 37.368.

TYPE HOST. — *Hemichromis fasciatus* Peters, 1857.

TYPE LOCALITY. — No type locality mentioned in the original description.

SITE. — Gills.

ADDITIONAL LOCALITIES. — Kribi, Ejambwé River, Cameroon; Bamako, Niger River, Mali; Senegal, Gambia, Mali and Côte d'Ivoire (Pariselle & Euzet 2004).

Onchobdella krachii Paperna, 1968

Onchobdella krachii Paperna, 1968: 205, figs 3d, 4c-e.

TYPE MATERIAL. — BMNH 1968.9.4.4; MRAC MT 35.574 (Paperna 1979).

TYPE HOST. — *Chromidotilapia guentheri* (Sauvage, 1882).

TYPE LOCALITY. — Kpandu and Kete Krachi, Volta Lake, Ghana.

SITE. — Gills.

Onchobdella melissa Pariselle & Euzet, 1995

Onchobdella melissa Pariselle & Euzet, 1995a: 206, fig. 4.

TYPE MATERIAL. — Holotype: MNHN 466 HF Tg65. Paratypes: MNHN 467 HF Tg66; BMNH 1994.5.5.2;

MRAC 37.365 A and 37.366 B.

TYPE HOST. — *Pelmatochromis buettikoferi* (Steindachner, 1894).

TYPE LOCALITY. — Koleyá, Konkouré River, Guinea.

SITE. — Gills.

Onchobdella pterigialis Paperna, 1968

Onchobdella pterigialis Paperna, 1968: 203-205, figs 3c, e, 4a, b.

TYPE MATERIAL. — Holotype: BMNH 1968.9.4.1.

TYPE HOST. — *Hemichromis bimaculatus* Gill, 1862.

TYPE LOCALITY. — Nungua dam, East of Accra, Ghana.

SITE. — Fins.

ADDITIONAL SITE. — Gills.

ADDITIONAL LOCALITY. — Mamahuma stream, East of Accra, Ghana

REMARKS

Dossou (1973), in his PhD thesis on the fish parasites from South Benin, re-described *O. pterigialis* (as *O. pterygialis*) and indicated a new host: *Pelmatochromis caudifasciatus* Boulenger, 1913 (the species determination of this new host remains uncertain; in fact, it has been synonymised with *Parananochromis caudifasciatus* (Boulenger, 1913) which is limited to Southern Cameroon, the Northern part of the Congo and the Rio Muni; this distribution excludes the Benin Rivers).

Onchobdella silverai Pariselle & Euzet, 1995

Onchobdella silverai Pariselle & Euzet, 1995a: 206-208, fig. 5.

TYPE MATERIAL. — Holotype: MNHN 468 HF Tg67. Paratypes: MNHN 467 HF Tg66; BMNH 1994.5.5.3; MRAC 37.365 B and 37.366 A.

TYPE HOST. — *Pelmatochromis buettikoferi* (Steindachner, 1894).

TYPE LOCALITY. — Koleyá, Konkouré River, Guinea.

SITE. — Gills.

Onchobdella spirocirra Paperna, 1968

Onchobdella spirocirra Paperna, 1968: 201-203, figs 2, 3a.

TYPE MATERIAL. — Holotype: BMNH 1968.9.4.2.

TYPE HOST. — *Hemichromis bimaculatus* Gill, 1862.

TYPE LOCALITY. — No type locality mentioned in the original description.

SITE. — Gills.

ADDITIONAL LOCALITY. — Afram sector, Volta Lake, Ghana.

Genus *Scutogyrus* Pariselle & Euzet, 1995

TYPE SPECIES. — *Scutogyrus minus* (Dossou, 1982), by subsequent designation (Pariselle & Euzet 1995b).

OTHER SPECIES INCLUDED. — *Scutogyrus bailloni* Pariselle & Euzet, 1995; *S. chikhii* Pariselle & Euzet, 1995; *S. ecoutini* Pariselle & Euzet, 1995; *S. gravivaginus* (Paperna & Thurston, 1969); *S. longicornis* (Paperna & Thurston, 1969).

DIAGNOSIS. — Ancyrocephalidae. Three pairs of cephalic glands. Two posterior ocellae with lenses. Two small anterior ocellae, sometimes absent. Intestinal caeca without diverticula, joined posteriorly. Two pairs of anchors, one dorsal and one ventral. Dorsal transverse bar highly arched, enlarged laterally, winged, having in its median portion two very long auricles hollow at their bases. Ventral transverse bar arched, rigid, supporting one large, thin oval plate marked by fan-shaped median thickenings. Fourteen uncinuli. Testis median, posterior to the body. Vas deferens dextral, not encircling intestinal caeca. Seminal vesicle present. One prostatic reservoir. Male copulatory complex with penis and accessory piece. Median pre-testicular ovary. Vaginal opening sub-lateral, dextral; vagina tubular, sclerotised. Seminal receptacle present. Gill parasites of African cichlid fishes.

Scutogyrus minus (Dossou, 1982)

Cichlidogyrus longicornis minus Dossou, 1982: 309-312, figs 19-23.

Cichlidogyrus minus — Pariselle & Euzet 1995b: 158-161, figs 2, 3.

Scutogyrus minus — Pariselle & Euzet 1995b.

TYPE MATERIAL. — Holotype: MNHN Tj141.

Paratype: MNHN Tj142.

OTHER MATERIAL. — MNHN 460 HF Tg55; MNHN 460 HF Tg56 and Tg57; BMNH 1994.4.7.1; MRAC 37.357 (Pariselle & Euzet 1995b).

TYPE HOST. — *Sarotherodon melanotheron* Rüppell, 1852.

TYPE LOCALITY. — Ouémé and Couffo Rivers, Benin.

SITE. — Gills.

ADDITIONAL LOCALITIES. — Guinea and Côte d'Ivoire (Pariselle & Euzet 1995b).

REMARKS

Dossou (1982) suggested that *Cichlidogyrus longicornis minus* could be raised to species level. Douëllou (1993) indicated that this sub-species is uncertain and had to be invalidated. Pariselle & Euzet (1995b) did not agree with Douëllou.

Scutogyrus longicornis (Paperna & Thurston, 1969)

Cichlidogyrus longicornis longicornis Paperna & Thurston, 1969: 20-22, fig. 3a, b, d.

Cichlidogyrus longicornis — Douëllou 1993: 170-172, fig. 7₁, 7₂.

Scutogyrus longicornis — Pariselle & Euzet 1995b: 161-163, figs 4, 5.

Actinocleidus muelleri Ferdousi & Chandra, 2002: 56, 57, fig. 4.

TYPE MATERIAL. — Holotype from *Sarotherodon galilaeus*: MRAC M.T. 35.931 (Paperna 1979).

Paratypes: private collection of Dr Paperna.

OTHER MATERIAL. — MNHN 128 HF (Douëllou 1993); MNHN 461 HF Tg58 and Tg59; BMNH 1994.4.7.2; MRAC 37.358 (Pariselle & Euzet 1995b).

TYPE HOST. — *Sarotherodon galilaeus* (Linnaeus, 1758).

TYPE LOCALITY. — Lakes Georges and Albert, Uganda.

ADDITIONAL HOSTS. — *Oreochromis niloticus* (Linnaeus, 1758) and *Tilapia zillii* Gervais, 1848 (Paperna 1979) (for *T. zillii*: as species belonging to *Scutogyrus* are only found on mouthbreeder cichlid fishes, it is probably the result

of a sampling error [mix of samples or contamination] or of host identification); *Oreochromis mortimeri* (Trewavas, 1966) (Douëllou 1993); *O. mossambicus* (Ferdousi & Chandra 2002).

SITE. — Gills.

ADDITIONAL LOCALITIES. — Kete Kratchi, Volta Lake, Ghana (Paperna 1969); Cairo, Nile River, Egypt on *O. niloticus* (Ergens 1981); Kariba Lake, Zimbabwe on *O. mortimeri* (Douëllou 1993). Senegal and Côte d'Ivoire on *O. niloticus* (Pariselle & Euzet 1995b). Bangladesh in BAU and BFRI fish farm ponds on introduced *O. niloticus* and *O. mossambicus* (Ferdousi & Chandra 2002).

REMARKS

Dossou (1982) suggested that *C. longicornis longicornis* could be raised to species level, this was done by Douëllou (1993).

Scutogyrus gravivaginus (Paperna & Thurston, 1969)

Cichlidogyrus longicornis gravivaginus Paperna & Thurston, 1969: 20-23, fig. 3c, e-g.

Cichlidogyrus gravivaginus — Douëllou 1993: 172, 173, fig. 7₃.

Scutogyrus gravivaginus — Pariselle & Euzet 1995b: 163-165, figs 6, 7.

TYPE MATERIAL. — Holotype: MRAC M.T. 35.932 (Paperna 1979).

Paratypes: private collection of Paperna.

OTHER MATERIAL. — MNHN 129 HF (Douëllou 1993).

TYPE HOST. — *Oreochromis leucostictus* (Trewavas, 1933).

TYPE LOCALITY. — Jinja and Albert Lake, Uganda.

ADDITIONAL HOSTS. — *Oreochromis variabilis* (Boulenger, 1906) (Paperna 1979); *Oreochromis mortimeri* (Trewavas, 1966) (Douëllou 1993).

SITE. — Gills.

ADDITIONAL LOCALITY. — Kariba Lake, Zimbabwe on *Oreochromis mortimeri* (Trewavas, 1966) (Douëllou 1993).

REMARKS

Dossou (1982) suggested that *C. longicornis gravivaginus* could be raised to species level, this was done by Douëllou (1993).

***Scutogyrus bailloni* Pariselle & Euzet, 1995**

Scutogyrus bailloni Pariselle & Euzet, 1995b: 165, 166, figs 8, 9.

TYPE MATERIAL. — Holotype: MNHN 462 HF Tg60. Paratypes: MNHN 462 HF Tg61; BMNH 1994.4.7.3; MRAC 37.359.

TYPE HOST. — *Sarotherodon galilaeus* (Linnaeus, 1758).

TYPE LOCALITY. — W National Park, Mékrou River, Niger.

SITE. — Gills.

***Scutogyrus ecoutini* Pariselle & Euzet, 1995**

Scutogyrus ecoutini Pariselle & Euzet, 1995b: 167, 168, figs 10, 11.

TYPE MATERIAL. — Holotype: MNHN 463 HF Tg62. Paratypes: MNHN 463 HF Tg63; BMNH 1994.4.7.4; MRAC 37.360.

TYPE HOST. — *Sarotherodon occidentalis* (Daget, 1962).

TYPE LOCALITY. — La Ramié, Bourouma River, Guinea.

SITE. — Gills.

***Scutogyrus chikhii* Pariselle & Euzet, 1995**

Scutogyrus chikhii Pariselle & Euzet, 1995b: 171, 172, figs 12, 13.

TYPE MATERIAL. — Holotype: MNHN 464 HF Tg64. Paratypes: BMNH 1994.4.7.5; MRAC 37.361.

TYPE HOST. — *Oreochromis mossambicus* (Peters, 1852).

TYPE LOCALITY. — Cayo Lake, Congo.

SITE. — Gills.

Genus *Cichlidogyrus* Paperna, 1960

TYPE SPECIES. — *Cichlidogyrus arthracanthus* Paperna, 1960, by original designation.

OTHER SPECIES INCLUDED. — *Cichlidogyrus acerbus* Dossou, 1982; *C. aegypticus* Ergens, 1981; *C. agnesi* Pariselle & Euzet, 1994; *C. albaretii* Pariselle & Euzet, 1998; *C. amietii* Birgi & Euzet, 1983; *C. amphoratus* Pariselle & Euzet, 1995; *C. anthemocolpos* Dossou, 1982;

DIAGNOSIS (according to Pariselle & Euzet [1997]). — Ancyrocephalidae. Three pairs of cephalic glands. Two posterior ocellae with crystalline lenses. Two small inconsistent anterior ocellae. Intestinal caeca unbranched, joined posteriorly. Two pairs of anchors, one dorsal and one ventral. Two transverse bars, dorsal with two auricles, ventral V-shaped. Fourteen uncinuli. Median posterior testis. Vas deferens on right side, not encircling intestinal caecum. Seminal vesicle present. One prosthetic reservoir. Male copulatory complex with penis and accessory piece. Median pre-testicular ovary. Sub-median vaginal dextral opening. Vagina sclerotised or not. Seminal receptacle present. Gill parasites of African Cichlidae, Nandidae and Cyprinodontidae.

Cichlidogyrus arthracanthus Paperna, 1960

Cichlidogyrus arthracanthus Paperna, 1960: 3-5, figs 1, 2.

TYPE MATERIAL. — No type material mentioned in the original description.

TYPE HOST. — *Tilapia zillii* (Gervais, 1848).

TYPE LOCALITY. — Fish culture research station, Dor, Israel.

ADDITIONAL HOSTS. — *Tristramella simonis* (Günther, 1864) and *T. sacra* (Günther, 1865); *Tilapia guineensis* (Bleeker, 1862) (Pariselle & Euzet 1995c).

SITE. — Gills.

ADDITIONAL LOCALITIES. — Western shore, Sea of Galilee, Israel. Ghana (Paperna 1965, 1979), Uganda (Paperna & Thurston 1969), Egypt (Ergens 1981), Senegal, Guinea, Ivory Coast and Congo (Pariselle & Euzet 1995c).

Cichlidogyrus acerbus Dossou, 1982

Cichlidogyrus acerbus Dossou, 1982: 314-316, figs 26-28.

TYPE MATERIAL. — Holotype: MNHN Tj135.
Paratype: MNHN Tj136.

TYPE HOST. — *Sarotherodon melanotheron melanotheron* Rüppell, 1852.

TYPE LOCALITY. — Ouémé and Couffo, Benin.

ADDITIONAL HOSTS. — *Sarotherodon melanotheron heudelotii* (Duméril, 1859) (Pariselle 1995).

SITE. — Gills.

ADDITIONAL LOCALITIES. — Ebrié lagoon, Bakré Lake and Samakro, Côte d'Ivoire on type host (Pariselle 1995). Kogon River, Koba, Konkouré River, Forecariah, Guinea; Saint Louis, Retba, Somone Lagoon, Ziguinchor, Senegal; Banjul, Gambia on *S. m. heudelotii* (Pariselle 1995).

Cichlidogyrus aegypticus Ergens, 1981

Cichlidogyrus aegypticus Ergens, 1981: 211, fig. 7.

TYPE MATERIAL. — Originally deposited at the CAS, with no mention of reference number.

Voucher specimen: MNHN 484 HF Tg96 and Tg97 (Pariselle & Euzet 1996).

TYPE HOST. — *Tilapia zillii* (Gervais, 1848).

TYPE LOCALITY. — Cairo, Nile River, Egypt.

ADDITIONAL HOSTS. — *Tilapia guineensis* (Bleeker, 1862) (Pariselle & Euzet 1995c), *Tilapia dageti* Thys van den Audenaerde, 1971, *Tilapia louka* Thys van den Audenaerde, 1969 and *Tilapia walteri* Thys van den Audenaerde, 1968 (Pariselle & Euzet 1996).

SITE. — Gills.

ADDITIONAL LOCALITIES. — Senegal, Guinea, and Congo on *T. guineensis* (Pariselle & Euzet 1995c); Côte d'Ivoire and Burkina Faso on *T. zillii*, Côte d'Ivoire on *T. dageti*; Guinea on *T. louka* and *T. walteri* (Pariselle & Euzet 1996).

REMARKS

Dossou (1982) described this species in Benin, but confused the identification with *C. gallus* Pariselle & Euzet, 1995 (see below under *Cichlidogyrus gallus*). The specimens of *C. aegypticus* from *T. louka* and *T. walteri* show a shape of the vagina slightly different from that described on *T. zillii*, which was not deemed sufficient for Pariselle & Euzet (1996) to create a new species.

Cichlidogyrus agnesi Pariselle & Euzet, 1995

Cichlidogyrus agnesi Pariselle & Euzet, 1995c: 189, 190, fig. 2.

TYPE MATERIAL. — Holotype: MNHN 220 HF Tk22. Paratypes: MNHN 220 HF Tk23, BMNH 1993.5.14.7, MRAC 37.338.

TYPE HOST. — *Tilapia guineensis* (Bleeker, 1862).

TYPE LOCALITY. — Tiassalé, Bandama River, Côte d'Ivoire.

SITE. — Gills.

ADDITIONAL LOCALITIES. — Senegal, Guinea and Congo on type host [Pariselle & Euzet 1996].

Cichlidogyrus albareti Pariselle & Euzet, 1998

Cichlidogyrus albareti Pariselle & Euzet, 1998: 275, 276, fig. 2.

TYPE MATERIAL. — Holotype: MNHN 543 HF Tk73. Paratypes: MNHN 543 HF Tk74, BMNH 1997.1.30.1,

MRAC 37.408.

TYPE HOST. — *Tilapia brevimanus* Boulenger, 1911.

TYPE LOCALITY. — La Ramié, Bourouma River, Guinea.

SITE. — Gills.

ADDITIONAL LOCALITY. — Ndyarendi, Kogon River, Guinea.

Cichlidogyrus anthemocolpos Dossou, 1982

Cichlidogyrus anthemocolpos Dossou, 1982: 307-309, figs 16-18.

TYPE MATERIAL. — Holotype: MNHN Tj133. Paratype: MNHN Tj134.

TYPE HOST. — *Tilapia zillii* (Gervais, 1848).

TYPE LOCALITY. — Ouémé, Benin.

SITE. — Gills.

Cichlidogyrus amieti Birgi & Euzet, 1983

Cichlidogyrus amieti Birgi & Euzet, 1983: 101-104, figs 1-3.

TYPE MATERIAL. — No type material mentioned in the original description.

TYPE HOST. — *Aphyosemion cameronense* (Boulenger, 1903) (first species cited by Birgi & Euzet [1983]) (Nothobranchiinae Radda & Pürzl, 1981).

TYPE LOCALITY. — Kala, Zamacoe, Cameroon.

ADDITIONAL HOST. — *Aphyosemion obscurum* (Ahl, 1924), junior synonym of *A. cameronense*.

SITE. — Gills.

REMARKS

Authors indicated in the original description that the presence of a *Cichlidogyrus* species on an *Aphyosemion* species is probably the result of a lateral transfer from a cichlid fish.

Cichlidogyrus amphoratus Pariselle & Euzet, 1996

Cichlidogyrus amphoratus Pariselle & Euzet, 1996: 115, figs 6, 7.

TYPE MATERIAL. — Holotype: MNHN 486 HF Tg100. Paratypes: MNHN 486 HF Tg99, BMNH 1996.1.5.16, MRAC 37.384.

TYPE HOST. — *Tilapia louka* Thys van den Audenaerde, 1969.

TYPE LOCALITY. — Laramié, Bourouma River, Guinea.

SITE. — Gills.

Cichlidogyrus arfii Pariselle & Euzet, 1995

Cichlidogyrus arfii Pariselle & Euzet, 1995a: 204, 205, fig. 3.

Cichlidogyrus dionchus Paperna, 1968: 91, pl. 1, fig. 7.

TYPE MATERIAL. — Holotype: MNHN 470 HF Tg69. Paratypes: MNHN 470 HF Tg70, BMNH 1994.5.5.1, MRAC 37.364.

TYPE HOST. — *Pelmatochromis buettikoferi* (Steindachner, 1894).

TYPE LOCALITY. — Koleya, Konkouré River, Guinea.

SITE. — Gills.

REMARKS

In the original description of *C. dionchus*, Paperna (1968) gave three different illustrations for copulatory organs, the figure 7 pl. 1 p. 91 (without references to host) resemble *C. arfii*, thus corresponding individuals have to be considered as *C. arfii*.

Cichlidogyrus berradae Pariselle & Euzet, 2003

Cichlidogyrus berradae Pariselle & Euzet, 2003: 196, fig. 3.

TYPE MATERIAL. — Holotype: MNHN 538 HF Tk63. Paratypes: MNHN 538 HF Tk64, BMNH 1997.1.29.1, MRAC 37.409, CAS M-385.

TYPE HOST. — *Tilapia cabrae* Boulenger, 1899.

TYPE LOCALITY. — Cayo Lake, Cabinda.

ADDITIONAL HOST. — *Tilapia guineensis* (Bleeker, 1862).

SITE. — Gills.

ADDITIONAL LOCALITY. — Loufoualéba Lake, Congo on *T. guineensis*.

Cichlidogyrus berrebi Pariselle & Euzet, 1994

Cichlidogyrus berrebi Pariselle & Euzet, 1994: 230, fig. 2.

TYPE MATERIAL. — Holotype and paratypes: MNHN 213 HF Tk14.

Paratypes: BMNH 1993.3.4.1; MRAC 37.330, 37.331 and 37.333.

TYPE HOST. — *Tylochromis jentinki* (Steindachner, 1895)

TYPE LOCALITY. — Ebrié Lagoon, Côte d'Ivoire.

SITE. — Gills.

ADDITIONAL LOCALITIES. — Kogon River, Guinea and Sine Saloum Rivers, Senegal.

REMARKS

Pariselle & Euzet (1994) noticed the unusual morphology of the dorsal transverse bar of *Cichlidogyrus* from *Tylochromis* Regan, 1920 hosts (auricles are continuous with convex face instead of attached on this face); pending new morphological or molecular data from these or other parasites from *Tylochromis*, they left these species in *Cichlidogyrus*.

Cichlidogyrus bifurcatus Paperna, 1960

Cichlidogyrus bifurcatus Paperna, 1960: 13, 14, fig. 9; 1979: 9, pl. 1, figs 1-6.

TYPE MATERIAL. — Paratype: MRAC M.T. 35.703 (Paperna, 1979).

TYPE HOST. — *Haplochromis flavijosephi* (Lortet, 1883).

TYPE LOCALITY. — Sea of Galilee, Israel.

ADDITIONAL HOSTS. — Juveniles of *Oreochromis aureus* (Steindachner, 1864); *Haplochromis squamipinnis* Regan, 1921, *H. elegans* Trewavas, 1933, *H. aeneocolor* Greenwood, 1973, *H. limax* Trewavas, 1933, *H. sp.* and *Pseudocrenilabrus multicolor* (Schoeller, 1903) (Paperna 1979).

SITE. — Gills.

REMARKS

Douëllou (1993) thought that *C. bifurcatus* was probably, at times, confused with *C. haplochromii*,

we do not agree: *C. bifurcatus* is a valid species, as its description, illustrations and hosts never vary in Paperna publications (1960, 1979).

Cichlidogyrus bilongi Pariselle & Euzet, 1995

Cichlidogyrus bilongi Pariselle & Euzet, 1995c: 190, 191, fig. 3.

TYPE MATERIAL. — Holotype: MNHN 218 HF Tk18. Paratypes: MNHN 218 HF Tk19, BMNH 1993.5.14.8, MRAC 37.337.

TYPE HOST. — *Tilapia guineensis* (Bleeker, 1862).

TYPE LOCALITY. — Tiassalé, Bandama River, Guinea.

SITE. — Gills.

ADDITIONAL LOCALITY. — Layo research station, Ebrié Lagoon, Côte d'Ivoire. Senegal and Congo on type host (*nobilis*).

Cichlidogyrus bonhommei

Pariselle & Euzet, 1998

Cichlidogyrus bonhommei Pariselle & Euzet, 1998: 279, 280, fig. 5.

TYPE MATERIAL. — Holotype: MNHN 545 HF Tk77. Paratypes: MNHN 545 HF Tk78, BMNH 1997.1.30.2, MRAC 37.403.

TYPE HOST. — *Tilapia buttikoferi* (Hubrecht, 1881).

TYPE LOCALITY. — Katonga, Little Scarcies River, Sierra Leone.

SITE. — Gills.

Cichlidogyrus bouvii Pariselle & Euzet, 1997

Cichlidogyrus bouvii Pariselle & Euzet, 1997: 223, fig. 2.

TYPE MATERIAL. — Holotype: MNHN 530 HF Tk48. Paratypes: MNHN 530 HF Tk49, BMNH 1997.1.28.2, MRAC 37.395.

TYPE HOST. — *Sarotherodon occidentalis* (Daget, 1962).

TYPE LOCALITY. — La Ramié, Bourouma River, Guinea.

SITE. — Gills.

ADDITIONAL LOCALITIES. — Kamouri, Batapon River, Guinea; Katonga, Little Scarcies River, Sierra Leone on type host.

Cichlidogyrus bychowskii (Markevich, 1934)*Ancyrocephalus bychowskii* Markevich, 1934.*Cichlidogyrus bychowskii* – Paperna 1960: 14.

TYPE MATERIAL. — No type material mentioned in the original description.

TYPE HOST. — *Hemichromis bimaculatus* Gill, 1862.

TYPE LOCALITY. — From a fish reared in the Leningrad aquarium.

ADDITIONAL HOSTS. — *Hemichromis fasciatus* Peters, 1857 and *Sarotherodon galilaeus* (Linnaeus, 1758) [Paperna 1968, 1969].

SITE. — Gills.

ADDITIONAL LOCALITIES. — Ghana on type host (Paperna 1965); Ghana on type host, *Hemichromis fasciatus* Peters, 1857 and *Sarotherodon galilaeus* (Linnaeus, 1758) (Paperna 1968, 1969).*Cichlidogyrus cirratus* Paperna, 1964*Cichlidogyrus cirratus* Paperna, 1964: 4, 5, figs 10, 11.*Cichlidogyrus nematocirrus* Paperna, 1969: 863, figs 54, 55; 1979: 13, pl. 3, figs 3-7.TYPE MATERIAL. — Of *C. cirratus*: Holotype and paratypes in the helminthological collection of the Department of Parasitology Hebrew University, Hassad Medical School, Israel, no number mentioned.Of *C. nematocirrus*: Holotype: MRAC M.T. 35.583 (Paperna 1979).TYPE HOST. — Of *C. cirratus*: *Sarotherodon galilaeus* (Linnaeus, 1758).Of *C. nematocirrus*: *Oreochromis niloticus* (Linnaeus, 1758) (Paperna 1979).TYPE LOCALITY. — Of *C. cirratus* Tiberias Lake, Israel. Of *C. nematocirrus*: Man-made Volta Lake, Ghana.ADDITIONAL HOST. — Of *C. cirratus*: *Oreochromis niloticus* (Ergens 1981).Of *C. nematocirrus*: *Tilapia zillii* (Gervais, 1848), *Oreochromis variabilis* (Boulenger, 1906) and *Oreochromis esculentus* (Graham, 1928) (Paperna 1979).

SITE. — Gills.

ADDITIONAL LOCALITIES. — Cairo, Nile River, Egypt (Ergens 1981) on *O. niloticus*. Senegal on type host (nobis).

REMARKS

Cichlidogyrus cirratus and *C. nematocirrus* have high morphological similarities and are both found on *O. niloticus*. The only difference between these two species is the length of the penis (320 vs. 145 µm) which is not easy to measure (very long, sinuous and thin penis), thus we consider that *C. nematocirrus* is a junior synonym of *C. cirratus*.*Cichlidogyrus cubitus* Dossou, 1982*Cichlidogyrus cubitus* Dossou, 1982: 306, 307, figs 13-15.

TYPE MATERIAL. — Holotype: MNHN Tj114. Paratype: MNHN Tj115.

TYPE HOST. — *Tilapia zillii* (Gervais, 1848).

TYPE LOCALITY. — Ouémé, Benin.

SITE. — Gills.

Cichlidogyrus dageti Dossou & Birgi, 1984*Cichlidogyrus dageti* Dossou & Birgi, 1984: 106-108, figs 9-11.

TYPE MATERIAL. — Holotype: MNHN 208 TC Tj134.

TYPE HOST. — *Hemichromis fasciatus* Peters, 1857.

TYPE LOCALITY. — No type locality mentioned in the original description.

SITE. — Gills.

ADDITIONAL LOCALITY. — Nyong Basin, Cameroon on type host.

Cichlidogyrus digitatus Dossou, 1982*Cichlidogyrus digitatus* Dossou, 1982: 303-306, figs 10-12.*Cichlidogyrus cf. brevicirrus* – Paperna 1969: 864, figs 78, 79.*Cichlidogyrus halinus* Paperna, 1969 (part): 860, 861, fig. 71 left drawing (individuals from *Tilapia guineensis* in the original description) (cf. Pariselle & Euzet 1996: 117, 118, fig. 10).

TYPE MATERIAL. — *C. digitatus*: Holotype: MNHN Tj116. Paratype: MNHN Tj117.

OTHER MATERIAL. — *C. cf. brevicirrus*: “paratype”: MRAC M.T. 35.586 from *Tilapia discolor* (Günther, 1903) (Paperna 1979) (see Remarks under *Cichlidogyrus dionchus* chapter below).

TYPE HOST. — *C. digitatus*: *Tilapia zillii* (Gervais, 1848).

TYPE LOCALITY. — Ouémé, Benin.

ADDITIONAL HOSTS. — *Tilapia guineensis* (Bleeker, 1862) (Paperna 1969). *Tilapia dageti* Thys van den Audenaerde, 1971, *T. guineensis* (Bleeker, 1862) and *T. louka* Thys van den Audenaerde, 1969 (Pariselle & Euzet 1996). *Tilapia brevimanus* Boulenger, 1911 (Pariselle & Euzet 1998).

SITE. — Gills.

ADDITIONAL LOCALITIES. — Volta Lake, Ghana on *Tilapia guineensis* (original description of *C. halinus* in Paperna 1969). Senegal, Guinea, Côte d’Ivoire and Congo on *Tilapia guineensis* (Pariselle & Euzet 1995c); Côte d’Ivoire, Guinea, Senegal, Mali and Gambia on *Tilapia zillii*, *T. dageti*, *T. guineensis* and *T. louka* (Pariselle & Euzet 1996); Guinea on *T. brevimanus* (Pariselle & Euzet 1998).

REMARKS

In our opinion, measurements and figures given in the original description of *C. cf. brevicirrus* by Paperna (1969) are almost identical to those of *C. digitatus* Dossou, 1982, with which this species had to be synonymised, despite the opinion of Paperna (1979), who synonymised it with *C. dionchus*.

Pariselle & Euzet 1996 synonymised a part of the individuals named *C. halinus* with *C. digitatus* (those found on *Tilapia guineensis* by Paperna [1969: fig 71 left drawing]).

Cichlidogyrus dionchus Paperna, 1968

Cichlidogyrus dionchus Paperna, 1968: 89, 90, pl. 1, figs 4, 5.

Cichlidogyrus brevicirrus Paperna & Thurston, 1969: 17, 18. — Paperna 1979: 9, 10.

TYPE MATERIAL. — Holotype: MRAC M.T. 35.585 from type host (Paperna 1979).

TYPE HOST. — Of *C. dionchus*: *Sarotherodon galilaeus* (Linnaeus, 1758).

Of *C. brevicirrus*: *Haplochromis guerti* (Pellegrin, 1904).

TYPE LOCALITY. — Of *C. dionchus*: Mamahuma stream, Accra, Ghana.

Of *C. brevicirrus*: Jinja, Kazi, Victoria Lake, Uganda.

ADDITIONAL HOSTS. — Of *C. dionchus*: *Chromidotilapia guentheri* (Sauvage, 1882) (Paperna 1979).

Of *C. brevicirrus*: *Haplochromis longirostris* (Hilgendorf, 1888), *Haplochromis obesus* (Boulenger, 1906), *Haplochromis obliquidens* (Hilgendorf, 1888), *Haplochromis* sp., *Hoplotilapia retrodens* (Hilgendorf, 1888) and *Tilapia zillii* (Gervais, 1848).

SITE. — Gills.

ADDITIONAL LOCALITIES. — Afram sector, Volta Lake and Adutor lower reaches of the Volta River, Ghana on *H. fasciatus*; Ghana on *Chromidotilapia guentheri* (Paperna 1979).

REMARKS

Paperna (1968) used for this species two spellings: *C. dioncus* and *C. dionchus*, as the first one was latter use by Paperna (1979) and other authors, we accept this spelling. Dossou & Birgi (1984) indicated that a proportion of individuals named *C. dionchus* by Paperna (1968: fig. 6, p. 91) correspond to *C. falcifer* (individuals from *Hemichromis fasciatus*) and we agree with that. Dossou (1982) indicated that *C. dionchus* (on *Sarotherodon galilaeus*) is a valid species. Some hosts were added by Paperna (1979): *Pseudocrenilabrus multicolor* (Schoeller, 1903), *Tilapia rendalli* (Boulenger, 1897) and *Haplochromis wingatii* (Boulenger, 1902), but probably because of the presence of *C. cf. brevicirrus*, which was synonymised by this author with *C. dionchus*, when we propose to synonymise *C. cf. brevicirrus* with *C. digitatus*. In the same way, Paperna (1979) deposits a paratype (MRAC M.T. 35.586, probably *C. cf. brevicirrus*) from *Tilapia discolor* (Günther, 1903) for *C. dionchus*, we consider this specimen as being a *C. digitatus*. In the original description by Paperna (1968) the only true *C. dionchus* was illustrated by the drawing 5 (pl. 1, p. 91) and by the figures of *C. brevicirrus* in its original description (Paperna & Thurston 1969: 18), this latter species had been synonymised with *C. dionchus* by Paperna (1979); we agree with this conclusion.

Cichlidogyrus dossoui Douëllou, 1993

Cichlidogyrus dossoui Douëllou, 1993: 174, 175, fig. 9.

TYPE MATERIAL. — Holotype: MNHN 139 HF.

TYPE HOST. — *Tilapia rendalli* (Boulenger, 1897).

TYPE LOCALITY. — Kariba Lake, Zimbabwe.

ADDITIONAL HOSTS. — *Oreochromis mortimeri* (Trewavas, 1966) and *Serranochromis macrocephalus* (Boulenger, 1899).

SITE. — Gills.

Cichlidogyrus douellouae
Pariselle, Bilong Bilong & Euzet, 2003

Cichlidogyrus douellouae Pariselle, Bilong Bilong & Euzet, 2003: 203–205, fig. 3.

TYPE MATERIAL. — Holotype: MNHN 535 HF Tk58. Paratypes: MNHN 535 HF Tk59, BMNH 1997.2.3.1, MRAC 37.410.

TYPE HOST. — *Sarotherodon galilaeus* (Linnaeus, 1758).

TYPE LOCALITY. — W National Park, Mekrou River, Niger.

ADDITIONAL HOST. — *Sarotherodon galilaeus sanagaensis* (Thys van den Audenaerde, 1966).

SITE. — Gills.

ADDITIONAL LOCALITIES. — Bama, Kou River, Burkina Faso on type host, Edéa, Sanaga River, Cameroon on *S. g. sanagaensis*.

Cichlidogyrus ergensi Dossou, 1982

Cichlidogyrus ergensi Dossou, 1982: 301–303, figs 7–9.

Cichlidogyrus sp. — Ergens 1981: 212, 213.

TYPE MATERIAL. — Holotype: MNHN Tj113.

TYPE HOST. — *Tilapia zillii* (Gervais, 1848).

TYPE LOCALITY. — Ouémé, Benin.

ADDITIONAL HOST. — *Tilapia guineensis* (Bleeker, 1862) (Pariselle & Euzet 1995c).

SITE. — Gills.

ADDITIONAL LOCALITIES. — Cairo, Nile River, Egypt (description of *Cichlidogyrus* sp. by Ergens [1981]); Senegal, Guinea, Côte d'Ivoire and Congo on *Tilapia guineensis* (Bleeker, 1862) (Pariselle & Euzet 1995c).

Cichlidogyrus euzeti Dossou & Birgi, 1984

Cichlidogyrus euzeti Dossou & Birgi, 1984: 108, 109, figs 12–14.

TYPE MATERIAL. — Holotype: MNHN 209 TC Tj135.

TYPE HOST. — *Hemichromis fasciatus* Peters, 1857.

TYPE LOCALITY. — Benin and Cameroon.

SITE. — Gills.

ADDITIONAL LOCALITY. — Congo on type host (Pariselle & Euzet 2004).

Cichlidogyrus falcifer Dossou & Birgi, 1984

Cichlidogyrus falcifer Dossou & Birgi, 1984: 104–106, figs 5–8.

Cichlidogyrus dionchus Paperna, 1968 (part): 89–91, pl. 1, fig. 6 (individuals coming from *Hemichromis fasciatus*) (cf. Dossou & Birgi 1984: 104–106).

TYPE MATERIAL. — Holotype: MNHN 207 TC Tj133.

TYPE HOST. — *Hemichromis fasciatus* Peters, 1857.

TYPE LOCALITY. — Benin and Cameroon.

SITE. — Gills.

ADDITIONAL LOCALITIES. — Congo, Senegal, Mali, Gambia and Côte d'Ivoire on type host (Pariselle & Euzet 2004).

REMARKS

Dossou & Birgi (1984) indicated that *C. falcifer* corresponds to a proportion of specimens named *C. dionchus* by Paperna in 1968; we agree with that: among the three figures given by Paperna (1968: 91), we consider number 6 (pl. I) to be a *C. falcifer* and probably was found on *H. fasciatus*.

Cichlidogyrus flexicolpos Pariselle & Euzet, 1995

Cichlidogyrus flexicolpos Pariselle & Euzet, 1995c: 193, 194, fig. 5.

TYPE MATERIAL. — Holotype: MNHN 217 HF Tk16. Paratypes: MNHN 217 HFTk17, BMNH 1993.5.14.9, MRAC 37.340.

TYPE HOST. — *Tilapia guineensis* (Bleeker, 1862).

TYPE LOCALITY. — Tiassalé, Bandama River, Côte d'Ivoire.

ADDITIONAL HOST. — *Tilapia dageti* Thys van den Audenaerde, 1971 (Pariselle & Euzet 1996).

SITE. — Gills.

ADDITIONAL LOCALITIES. — Layo research station, Ebrié Lagoon, Côte d'Ivoire; Congo River, Congo on type host. Senegal and Guinea on *T. guineensis* and *T. dageti* (Pariselle & Euzet 1996).

Cichlidogyrus fontanai Pariselle & Euzet, 1997

Cichlidogyrus fontanai Pariselle & Euzet, 1997: 223, 224, fig. 3.

TYPE HOST. — *Sarotherodon occidentalis* (Daget, 1962).

TYPE LOCALITY. — La Ramié, Bourouma River, Guinea.

SITE. — Gills.

ADDITIONAL LOCALITIES. — Kamouri, Batapon River, Guinea and Little Scarcies River, Sierra Leone on type host.

Cichlidogyrus halinus Paperna, 1969

Cichlidogyrus halinus Paperna, 1969: 860, 861, figs 70, 71 right drawing, 72.

Cichlidogyrus erectus Dossou, 1982: 316-318, fig. 29-30 (cf. Pariselle & Euzet 1996: 117).

TYPE MATERIAL. — Of *C. halinus*: Holotype: MRAC M.T. 35.928 (Paperna 1979).

Of *C. erectus*: Holotype: MNHN TJ 143.

TYPE HOST. — Of *C. halinus*: *Sarotherodon melanotheron heudeletii* (Duméril, 1861).

Of *C. erectus*: *Sarotherodon melanotheron melanotheron* Rüppell, 1852.

TYPE LOCALITY. — Of *C. halinus*: Peshs lagoon, east of Accra, South Ghana.

Of *C. erectus*: Ouémé and Couffo, Benin.

SITE. — Gills.

Cichlidogyrus halli (Price & Kirk, 1967)

Cleidodiscus halli Price & Kirk, 1967: 139–141, figs 1–12. — Paperna 1979: 10.

Cichlidogyrus halli typicus Paperna, 1979: 11, pl. 2, fig. 1. — Douëllou 1993: 160–164, fig. 3.

Cichlidogyrus tubicirrus magnus Paperna & Thurston, 1969: 26, fig. 6a, e. — Paperna 1979: 10.

Cichlidogyrus magnus — Dossou 1982: 312–314, figs 24, 25. — Douëllou 1993: 160–164.

Cichlidogyrus halli victorianus Paperna, 1979: 11, 12, pl. 2, figs 2, 3.

TYPE MATERIAL. — Of *C. halli*: Holotype: Albany Museum, Grahamstown, Republic of South Africa. Paratypes: Helminthological Collection, United States National Museum, Washington, DC; MRAC, no numbers mentioned. Voucher specimen from type host: MNHN 126 HF (Douëllou 1993).

Of *C. halli typicus*: Paratype: M.T. 35.511 from *Oreochromis niloticus* (only type specimen mentioned by Paperna 1979).

Of *C. tubicirrus magnus*: “Types”: private collection of Paperna, no number mentioned.

Of *C. halli victorianus*: Holotype: MRAC M.T. 35.941 from *Oreochromis variabilis* (Paperna 1979).

TYPE HOST. — Of *C. halli* and *C. halli typicus*: *Oreochromis shiranus shiranus* (Boulanger, 1897) (original host in Price & Kirk 1967).

Of *C. tubicirrus magnus*: *Oreochromis niloticus* (Linnaeus, 1758).

Of *C. magnus*: *Sarotherodon melanotheron* Rüppel, 1852 (in Dossou 1982).

Of *C. halli victorianus*: *Oreochromis variabilis* (Boulenger, 1906).

TYPE LOCALITY. — Of *C. halli* and *C. halli typicus*: Fort Johnston, Upper Shire River, Malawi.

Of *C. tubicirrus magnus*: Albert and Georges Lakes, Uganda.

Of *C. magnus*: Ouémé and Couffo, Bénin.

Of *C. halli victorianus*: Victoria Lake, Entebbe and Jinja, Uganda.

ADDITIONAL HOSTS. — *C. halli*: *Oreochromis mortimeri* (Trewavas, 1966) and *Serranochromis macrocephalus* (Boulenger, 1899) (Douëllou 1993). *Sarotherodon occidentalis* (Daget, 1962) (Pariselle & Euzet 1997).

C. halli typicus: *Oreochromis niloticus* (Linnaeus, 1758), *Sarotherodon galilaeus* (Linnaeus, 1758), *Oreochromis leucostictus* (Trewavas, 1933), *Oreochromis niloticus vulcani* (Trewavas,

1933) and *Oreochromis spilurus spilurus* (Günther, 1894). *C. halli victorianus*: *Oreochromis esculentus* (Graham, 1928) (Paperna 1979).

C. tubicirrus magnus: *Sarotherodon galilaeus* (Linnaeus, 1758), *Oreochromis leucostictus* (Trewavas, 1933).

SITE. — Gills.

ADDITIONAL LOCALITIES. — Of *C. halli*: Kariba Lake, Zimbabwe on *Oreochromis mortimeri* and *Serranochromis macrocephalus* (Douëllou 1993). Guinea and Sierra Leone on *Sarotherodon occidentalis* (Pariselle & Euzet 1997). Of *C. halli typicus*: lakes Georges, Albert and Edward, Kajansi fish ponds, Uganda on *O. niloticus*; Lake Albert, Uganda and Volta Lake and lower Volta River, Ghana on *S. galilaeus*; lakes Georges and Albert; Uganda on *O. leucostictus*; Kajansi fish ponds, Uganda on introduced *O. niloticus vulcani* and *O. spilurus spilurus*.

REMARKS

Price & Kirk (1967) synonymised *Cichlidogyrus* with *Cleidodiscus* Mueller, 1934; this was confirmed by Price (1967). Price et al. (1969) rehabilitated *Cichlidogyrus* with five species (*C. arthracanthus*, *C. bifurcatus*, *C. bychowskii*, *C. longicirrus* and *C. tiberianus*), but kept in *Cleidodiscus* (valid genus) two species (*C. halli* and *C. tilapia*). Paperna (1979) move back to *Cichlidogyrus* the two *Cleidodiscus* species found on African cichlid fishes (*C. halli* and *C. tilapia*); this was confirmed by Douëllou (1993).

Considering measurements and figures by Paperna (1979: 11, pl. 2 figs 2, 3) and after the examination of type material, we did not find significant differences between *C. halli victorianus* and *C. halli*. So, despite the opinion of Douëllou (1993), we consider that *C. h. victorianus* had to be synonymised with *C. halli*.

The determination by Ergens (1981) of *Tilapia zillii* (Gervais, 1848) as host for *C. halli* in Egypt remains for us doubtful, in fact, this species is only found on mouthbreeders Cichlidae (i.e. genera *Oreochromis* and *Sarotherodon*).

Cichlidogyrus haplochromii

Paperna & Thurston, 1969

Cichlidogyrus haplochromii Paperna & Thurston, 1969: 18–20, fig. 2. — Paperna 1979: 12, pl. 3, figs 1, 2. — Douëllou 1993: 168–170, fig. 6.

Cichlidogyrus dionchus Paperna, 1968 (see Remarks below). — Paperna 1979: 9, 10, pl. 1, fig. 7.

Cichlidogyrus tubicirrus minutus Paperna & Thurston, 1969: 26–28, fig. 6b, f (individuals from haplochromiine hosts).

Cichlidogyrus tubicirrus – Paperna 1979: 14 (individuals from haplochromiine hosts).

TYPE MATERIAL. — “Types”: private collection of Dr Paperna, no number mentioned.

Of *C. tubicirrus*: “Types”: private collection of Paperna, no number mentioned (original description of *C. tubicirrus minutus*); “Holotype”: MRAC M.T. 34.291 from *Haplochromis schubotzi* Boulenger, 1914 (Paperna 1979).

OTHER MATERIAL. — MNHN 134 HF (Douëllou 1993).

TYPE HOST. — *Haplochromis guerti* (Pellegrin, 1904). Of *C. tubicirrus*: *Haplochromis schubotzi* (Paperna 1979).

TYPE LOCALITY. — Jinja, Uganda for *C. haplochromii* and *C. tubicirrus*.

ADDITIONAL HOSTS. — *C. haplochromii*: *Haplochromis macrognathus* Regan, 1922, *Haplochromis nubilus* (Boulenger, 1906), *Haplochromis obliquidens* (Hilgendorf, 1888), *Haplochromis wingatii* (Boulenger, 1902), *Haplochromis* sp., *Hoplotilapia retrodens* (Hilgendorf, 1888), *Macropleurodus bicolor* (Boulenger, 1906) and *Platytaeniodus degeni* Boulenger, 1906. *Haplochromis petronius* Greenwood, 1973 (Paperna 1979). *Pharyngochromis darlingi* (Boulenger, 1911) (Douëllou 1993).

C. tubicirrus: *Haplochromis angustifrons* Boulenger, 1914, *Haplochromis guerti* (Pellegrin, 1904), *Haplochromis longirostris* (Hilgendorf, 1888), *Haplochromis macrops* (Boulenger, 1911), *Haplochromis obesus* (Boulenger, 1906), *Haplochromis obliquidens* (Hilgendorf, 1888), *Haplochromis squamipinnis* Regan, 1921, *Haplochromis* sp., *Hoplotilapia retrodens* (Hilgendorf, 1888) (original description of *C. tubicirrus minutus*); *Haplochromis aeneocolor* Greenwood, 1973, *Haplochromis limax* Trewavas, 1933, *Haplochromis nubilus* (Boulenger, 1906), *Haplochromis nigripinnis* Regan, 1921, *Haplochromis elegans* Trewavas, 1933, *Haplochromis petronius* Greenwood, 1973, *Tilapia* sp. (Paperna 1979).

SITE. — Gills.

ADDITIONAL LOCALITIES. — *C. haplochromii*: Kazi, Uganda on type host; George Lake, Uganda on *Haplochromis wingatii* and *Haplochromis* sp., Kariba Lake, Zimbabwe on *Pharyngochromis darlingi* (Douëllou 1993).

C. tubicirrus: Georges Lake, Uganda on *Haplochromis angustifrons*, *H. elegans*, *H. limax*, *H. macrops*, *H. nigripinnis*, *H. petronius*, *H. schubotzi*, *H. squamipinnis*, *Haplochromis* sp. (original description of *C. tubicirrus minutus*); Kazinga Channel, Uganda on *Haplochromis squamipinnis*, *H. aeneocolor*, North Victoria Lake, Uganda on *Haplochromis guerti*, *H. longirostris*, *H. obesus*, *H. obliquidens*, *H. nubilus*,

Hoplotilapia retrodens, *Oreochromis leucostictus*, *Tilapia* sp., Albert Lake, Nabugabo, Bunyoni and Mulehe, Uganda and Ruaha River, Tanzania on *Haplochromis* spp.

REMARKS

Paperna (1979) admitted he probably confused this species, according to hosts and locations with *C. tubicirrus* and *C. bifurcatus*. Douëllou (1993) indicated that *C. haplochromii* represents probably a species complex. Paperna (1979: pl. 1, fig. 7) gave drawings of male copulatory organs as being *C. dionchus*; we think that it is in fact an illustration of *C. haplochromii* genitalia; Paperna in the original description specified neither hosts nor measurements and provided no drawings of haptoral sclerotised parts. The validity of type host, type locality, holotype and paratypes cited by Paperna (1979) for *Cichlidogyrus tubicirrus* is dubious. In the original description of *Cichlidogyrus tubicirrus minutus* by Paperna & Thurston (1969), the figure and measurements correspond exactly to *C. haplochromii* (cf. Douëllou 1993: 165, 169), at least for specimens from hosts of the genus *Haplochromis* (like *C. haplochromii*), which have to be synonymised with *C. haplochromii* (this concurs with remarks in Douëllou 1993: 169, 170).

Cichlidogyrus hemi Pariselle & Euzet, 1998

Cichlidogyrus hemi Pariselle & Euzet, 1998: 276, fig. 3.

TYPE MATERIAL. — Holotype: MNHN 544 HF Tk75. Paratypes: MNHN 544 HF Tk76, MRAC 37.411.

TYPE HOST. — *Tilapia brevimanus* Boulenger, 1911.

TYPE LOCALITY. — La Ramié, Bourouma River, Guinea.

SITE. — Gills.

ADDITIONAL LOCALITIES. — Kogon and Ndyarendi, Kogon River, Guinea.

Cichlidogyrus inconsultans

Birgi & Lambert, 1987

Cichlidogyrus inconsultans Birgi & Lambert, 1987: 103. New name for *Cichlidogyrus euzeti* Birgi & Lambert, 1986: 525–527, figs 4–6.

TYPE MATERIAL. — No type material mentioned in the original description.

TYPE HOST. — *Polycentropsis abbreviata* Boulenger, 1901 (Nandidae).

TYPE LOCALITY. — Mouanko, Cameroon.

SITE. — Gills.

REMARKS

This species was re-named *C. inconsultans* because the name *C. euzeti* Dossou & Birgi, 1984 already exists for a parasite from *Hemichromis fasciatus*.

Cichlidogyrus karibae Douëllou, 1993

Cichlidogyrus karibae Douëllou, 1993: 175-177, fig. 9.

TYPE MATERIAL. — Holotype (?): MNHN 136 HF.

TYPE HOST. — *Sargochromis codringtonii* (Boulenger, 1908).

TYPE LOCALITY. — Kariba Lake, Zimbabwe.

ADDITIONAL HOST. — *Oreochromis mortimeri* (Trewavas, 1966).

SITE. — Gills.

Cichlidogyrus kothiasi Pariselle & Euzet, 1994

Cichlidogyrus kothiasi Pariselle & Euzet, 1994: 232-234, fig. 4.

TYPE MATERIAL. — Holotype and paratypes: MNHN 212 HF Tk13.

Paratypes: BMNH 1993.3.4.2, MRAC 37.332 and 37.334.

TYPE HOST. — *Tylochromis jentinki* (Steindachner, 1895).

TYPE LOCALITY. — Ebrié Lagoon, Côte d'Ivoire.

SITE. — Gills.

ADDITIONAL LOCALITY. — Kogon River, Guinea on type host.

REMARKS

Pariselle & Euzet (1994) noticed the unusual morphology of the dorsal transverse bar of *Cichlidogyrus* from *Tylochromis* (auricles are continuous with convex face instead of attached on this face); pending

new morphological or molecular data from these or other parasites of *Tylochromis*, they left these species in *Cichlidogyrus*.

Cichlidogyrus kouassii N'Douba, Thys van den Audenaerde & Pariselle, 1997

Cichlidogyrus kouassii N'Douba, Thys van den Audenaerde & Pariselle, 1997: 432, 433, fig. 2.

TYPE MATERIAL. — Holotype: MNHN 523 HF Tk43. Paratypes: MNHN 523 HF Tk44, BMNH 1996.10.10.5, MRAC 37.394.

TYPE HOST. — *Tilapia guineensis* (Bleeker, 1862).

TYPE LOCALITY. — Bakro, Ayamé Lake, Côte d'Ivoire.

SITE. — Gills.

Cichlidogyrus lagoonaris Paperna, 1969

Cichlidogyrus lagoonaris Paperna, 1969: 861, figs 73-77.

Cichlidogyrus gibbus Dossou, 1982: 318, 319, figs 31-33.

TYPE MATERIAL. — *C. lagoonaris*: Holotype: MRAC M.T. 35.929 (Paperna 1979).

C. gibbus: Holotype: MNHN Tj137; paratype: MNHN 138.

TYPE HOST. — *Sarotherodon melanotheron melanotheron* Rüppell, 1852.

ADDITIONAL HOST. — *Tilapia guineensis* (Bleeker, 1862).

TYPE LOCALITY. — *C. lagoonaris*: Lake Volta, Ghana.

C. gibbus: Ouémé and Couffo, Benin.

SITE. — Gills.

REMARKS

We consider that *C. gibbus*, which male apparatus is closely related to that of *C. lagoonaris*, is a junior synonym. Paperna gives *Sarotherodon melanotheron heudelotii* (Duméril, 1861) as type host for *C. lagoonaris* coming from Ghana, and yet this fish species is not present in this area (see Paugy *et al.* 2003), the sub-species from Ghana is *S. m. melanotheron*, which is considered as the type host (as in Dossou 1982 for *C. gibbus*).

Cichlidogyrus legendrei Pariselle & Euzet, 2003

Cichlidogyrus legendrei Pariselle & Euzet, 2003: 198, fig. 5.

Cichlidogyrus papernastrema
Price, Peebles & Bamford, 1969

Cichlidogyrus papernastrema Price, Peebles & Bamford, 1969: 120-122, figs 11-20.

TYPE MATERIAL. — No type material mentioned in the original description.

TYPE HOST. — *Tilapia sparrmanii* Smith, 1840.

TYPE LOCALITY. — Natal, South Africa.

SITE. — Gills.

Cichlidogyrus philander Douëllou, 1993

Cichlidogyrus philander Douëllou, 1993: 183, 184, fig. 13.

TYPE MATERIAL. — Holotype: MNHN 137 HF

TYPE HOST. — *Pseudocrenilabrus philander philander* (Weber, 1897).

TYPE LOCALITY. — Kariba Lake, Zimbabwe.

SITE. — Gills.

Cichlidogyrus pouyaudi Pariselle & Euzet, 1994

Cichlidogyrus pouyaudi Pariselle & Euzet, 1994: 230-232, fig. 3.

TYPE MATERIAL. — Holotype and paratypes: MNHN 214 HF Tk15.

Paratypes: BMNH 1993.3.4.3, MRAC 37.335.

TYPE HOST. — *Tylochromis jentinki* (Steindachner, 1895)

TYPE LOCALITY. — Ebrié Lagoon, Côte d'Ivoire.

SITE. — Gills:

ADDITIONAL LOCALITY. — Kogon River, Guinea.

REMARKS

Pariselle & Euzet (1994) noticed the unusual morphology of the dorsal transverse bar of *Cichlidogyrus* from *Tylochromis* (auricles are continuous with convex face instead of attached on this face); pending new morphological or molecular data from these or other parasites of *Tylochromis*, they left these species in *Cichlidogyrus*.

Cichlidogyrus quaestio Douëllou, 1993

Cichlidogyrus quaestio Douëllou, 1993: 181, 182, fig. 12.

TYPE MATERIAL. — Holotype: MNHN 137 HF.

TYPE HOST. — *Tilapia rendalli* (Boulenger, 1897).

TYPE LOCALITY. — Kariba Lake, Zimbabwe.

ADDITIONAL HOSTS. — *Sargochromis codringtonii* (Boulenger, 1908) and *Serranochromis macrocephalus* (Boulenger, 1899).

SITE. — Gills.

REMARKS

Douëllou (1993) thought that this species is close to *C. brevicirrus*, and that Thurston (1970) probably confused these two species in Uganda on *Tilapia rendalli* (Boulenger, 1897).

Cichlidogyrus reversati Pariselle & Euzet, 2003

SITE. — Gills.

ADDITIONAL LOCALITIES. — Adiopodoumé, Côte d'Ivoire; Niokolo-Koba National Park, Gambia River, Senegal and Sélingué, Niger River, Mali.

***Cichlidogyrus thurstonae* Ergens, 1981**

Cichlidogyrus thurstonae Ergens, 1981: 211, 212, fig. 8. — Pariselle *et al.* 2003: 207-209, fig. 6.

Cichlidogyrus tiberianus Paperna, 1960 individuals from: *Sarotherodon galilaeus* (Linnaeus, 1758) (in Paperna 1968: 92; 1969: 863); *Oreochromis niloticus* and *Haplochromis longirostris* (Hilgendorf, 1888) (in Paperna & Thurston 1969: 24, 25, fig. 5d left drawing); from *Oreochromis variabilis* (Boulenger, 1906), *O. esculentus* (Graham, 1928) and *O. niloticus* (Linnaeus, 1758) (in Paperna 1979: 14); see Remarks under *C. tiberianus*.

Cichlidogyrus gilli Ferdousi & Chandra, 2002: 52-54, fig. 2.

TYPE MATERIAL. — Holotype: CAS, no number mentioned.

OTHER MATERIAL. — MNHN 537 HF Tk62 (Pariselle *et al.* 2003).

TYPE HOST. — *Oreochromis niloticus* (Linnaeus, 1758).

TYPE LOCALITY. — Cairo, Nile River, Egypt.

ADDITIONAL HOST. — *Haplochromis longirostris* (Hilgendorf, 1888) (Paperna & Thurston 1969; Ergens 1981). *Oreochromis mossambicus* (Ferdousi & Chandra, 2002).

SITE. — Gills.

ADDITIONAL LOCALITIES. — Ghana on *Sarotherodon galilaeus* (Paperna 1968, 1969). Uganda on *O. niloticus* and *Haplochromis longirostris* (Paperna & Thurston 1969) and on *Oreochromis variabilis*, *O. esculentus* and *O. niloticus* (Paperna 1979). Senegal on type host (Pariselle *et al.* 2003). BFRI fish farm ponds, Bangladesh (on introduced *O. mossambicus*; Ferdousi & Chandra 2002).

REMARKS

This species was re-described by Pariselle *et al.* (2003) on the type host in Senegal as Ergens (1981) did not mention, in the original description, the auxiliary plate associated with the male apparatus.

***Cichlidogyrus tiberianus* Paperna, 1960**

Cichlidogyrus tiberianus Paperna, 1960: 10-12, figs 7, 8. — Dossou 1982: 299-301, figs 4-6. — Douëllou, 1993: 173, 174, fig. 8.

TYPE MATERIAL. — No type material mentioned in the original description.

TYPE HOST. — *Tilapia zillii* (Gervais, 1848).

TYPE LOCALITY. — Sea of Galilee, Israel.

ADDITIONAL HOSTS. — *Tristramella simonis simonis* (Günther, 1864) and *T. sacra* (Günther, 1865) (experimental infection only), *Haplochromis flavijosephi* (Lortet, 1883). *Tilapia rendalli* (Boulenger, 1897) (Paperna 1979; Douëllou 1993). *Tilapia coffeea* Thys van den Audenaerde, 1970, *Tilapia dageti* Thys van den Audenaerde, 1971, *T. guineensis* (Bleeker, 1862), *T. walteri* Thys van den Audenaerde, 1968 (Pariselle & Euzet 1995c, 1996).

SITE. — Gills.

ADDITIONAL LOCALITIES. — Southern Ghana on type host (Paperna 1965). Uganda on type host (Paperna & Thurston 1969). Uganda on *T. rendalli* (Paperna 1979). Egypt on type host (Ergens 1981). Benin on type host (Dossou 1982). Zimbabwe on *T. rendalli* (Douëllou 1993). Senegal, Guinea, Côte d'Ivoire and Congo on *Tilapia guineensis*, *T. coffeea*, *T. dageti*, *T. walteri* and type host (Pariselle & Euzet 1995c, 1996).

REMARKS

Ergens (1981) in Egypt found and re-described *C. tiberianus* on *Tilapia zillii*; he indicated that *C. tiberianus* on *Oreochromis niloticus* and *Haplo-*

chromis longirostris found in Uganda by Paperna & Thurston (1969) (with some differences with original descriptions from Ghana or Israel) had to be considered as *C. thurstonae*. Dossou (1982) in Benin found *C. tiberianus* on *Tilapia zillii*, he agreed with Ergens (1981) about the confusion made by Paperna & Thurston (1969) between *C. tiberianus* and *C. thurstonae*. Douëllou (1993), according to Ergens (1981), considered that Paperna & Thurston (1969) confused *C. tiberianus* with *C. thurstonae*; she added that Paperna (1968, 1969 and 1979) may have made the same error. Pariselle & Euzet (1995c, 1996) found *C. tiberianus* only from hosts of the sub-genus *Coptodon* (namely: *Tilapia coffeea*, *T. dageti*, *T. guineensis*, *T. walteri* and *T. zillii*). All these remarks are leading us to the same conclusion: all individuals described as *C. tiberianus* from mouthbreeders hosts (genus *Oreochromis* and *Sarotherodon*) have been confused with *C. thurstonae* by Paperna & Thurston (1969) or Paperna (1968, 1969 and 1979).

Cichlidogyrus tilapiae Paperna, 1960

SITE. — Gills.

ADDITIONAL LOCALITIES. — Dor, Fish Culture Research Station, Israel on *Oreochromis niloticus*; Ginossar, Fisheries Field Station, Israel on *Sarotherodon galilaeus*; Western shores, Sea of Galilee, Israel on *Tristramella sacra*. Southern Ghana on *O. niloticus* and *S. galilaeus* (Paperna 1965). Ghana on *Tilapia busumana* and *Hemichromis fasciatus* (Paperna 1968). Uganda on *Oreochromis leucostictus*, *O. mossambicus*, *Tilapia zillii* (experimental infestation) and *Haplochromis macronothus* (Paperna & Thurston 1969). Volta Basin, South Ghana on *Sarotherodon galilaeus*, *Oreochromis niloticus* and *Chromidotilapia guentheri* (Paperna 1979). Egypt on *Oreochromis niloticus* and *Tilapia zillii* (Ergens 1981). Kariba Lake, Zimbabwe on *Oreochromis mortimeri* (Douëllou 1993). Bangladesh in BFRI and BAU fish farm ponds on introduced *O. niloticus* and *O. mossambicus* (Ferdousi & Chandra 2002).

REMARKS

Paperna (1979) synonymised *Cichlidogyrus tubicirrus minutus* with *Cichlidogyrus tubicirrus*, the validity of type host, type locality, holotype and paratypes given in this paper is dubious; in the original description by Paperna & Thurston (1969), the figure and measurements of specimens from *Oreochromis leucostictus*, are almost identical to those of *C. tilapiae* (cf. Ergens 1981: 210), with which *C. tubicirrus* (from *O. leucostictus*) has to be synonymised.

Cichlidogyrus vexus Pariselle & Euzet, 1995

Cichlidogyrus vexus Pariselle & Euzet, 1995: 195-197, fig. 7.

TYPE MATERIAL. — Holotype: MNHN 219 HF Tk20. Paratypes: MNHN 219 HF Tk21, BMNH 1993.5.14.12, MRAC 37.339.

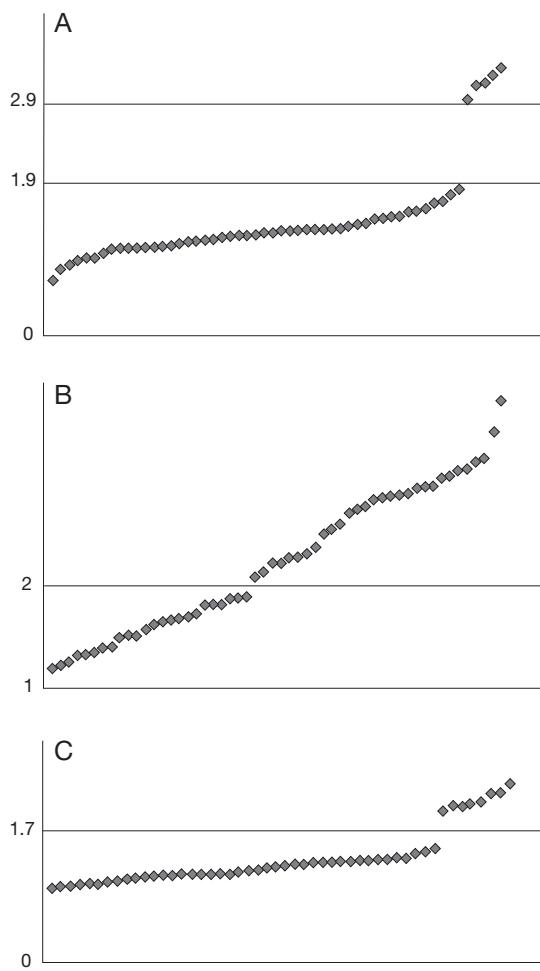

FIG. 1. — Definition of characters used in the identification keys of *Cichlidogyrus* Paperna, 1960 species (from 54 species studied): **A**, value repartition of the standardised length of dorsal transverse bar auricles; **B**, value repartition of the standardised length of uncinuli pairs III-VII; **C**, value repartition of the standardised length of uncinuli pair I.

TYPE LOCALITY. — Tiassalé, Bandama River, Côte d'Ivoire.

TYPE HOST. — *Tilapia guineensis* (Bleeker, 1862).

ADDITIONAL HOST. — *Tilapia zillii* (Gervais, 1848).

SITE. — Gills.

ADDITIONAL LOCALITIES. — Layo Research Station, Ebrié Lagoon, Côte d'Ivoire on type host; Kossou Lake, Côte d'Ivoire on type host and *T. zillii*. Senegal, Guinea and Congo on type host (Pariselle & Euzet 1996).

Cichlidogyrus yanni Pariselle & Euzet, 1996

Cichlidogyrus yanni Pariselle & Euzet, 1996: 118-120, fig. 11.

TYPE MATERIAL. — Holotype: MNHN 481 HF Tg90. Paratypes: MNHN 481 HF Tg91, BMNH 1996.1.5.22-25, MRAC 37.386.

TYPE HOST. — *Tilapia zillii* (Gervais, 1848).

TYPE LOCALITY. — Kogon River, Guinea.

ADDITIONAL HOSTS. — *Tilapia dageti* Thys van den Audenaerde, 1971, *T. guineensis* (Bleeker, 1862), *T. louka* Thys van den Audenaerde, 1969, and *T. walteri* Thys van den Audenaerde, 1968.

SITE. — Gills.

ADDITIONAL LOCALITIES. — Volta Noire River, Burkina Faso on type host; Niokolo-Koba National Park, Gambia River, Senegal on *T. dageti*; Layo Research Station, Ebrié Lagoon, Côte d'Ivoire and Senegal River, Senegal on *T. guineensis*; Bourouma River, Guinea on *T. louka*; Cavally and Nipoué Rivers, Côte d'Ivoire on *T. walteri*.

Cichlidogyrus zambezensis Douëllou, 1993

Cichlidogyrus zambezensis Douëllou, 1993: 178-181, fig. 11.

TYPE MATERIAL. — Holotype: MNHN 138 HF.

TYPE HOST. — *Serranochromis macrocephalus*.

ADDITIONAL HOST. — *Oreochromis mortimeri* (Trewavas, 1966).

TYPE LOCALITY. — Kariba Lake, Zimbabwe.

SITE. — Gills.

IDENTIFICATION KEY FOR STUDIED GENERA AND SPECIES

Following Dossou (1985), Pariselle & Euzet (1995c) and Pariselle (1996) the 71 species forming *Cichlidogyrus*, recorded from 66 different host species (64 Cichlidae, one Cyprinodontidae, one Nandidae), may be clustered in different groups according to the relative size of their haptoral sclerites. This has been confirmed by Pouyaud *et al.* (2006)

using both genetic and morphometrical data: "This division into four groups based on morphological criterions is also confirmed by the genetic distances". These groups can be easily characterised by morphometrical characters: length of the transverse dorsal bar auricles, of the uncinulus pairs III-VII, and of uncinuli pairs I.

The following may introduced morphometrical differences into the size range for these characters: developmental stage of the examined parasite; influence of temperature on the size of the sclerites (Ergens & Gelnar 1985; Appelby 1996); equipment used; method by which the measurements are taken, or other constraints (see Caltran *et al.* 1995). To avoid these problems, the length of each examined sclerite, according to Pariselle & Euzet (2003), will

be "standardised" by dividing its total length by the total length of uncinuli pair II, which retain its size from larval to adult stages of development in ancyrocephalid Monogenea.

- Length of transverse dorsal bar auricles: the distribution of this character values (Fig. 1A) shows a clear gap between species belonging to *Scutogyrus* (> 2.9) (Fig. 2E) and *Cichlidogyrus* (< 1.9) (Fig. 2F). This unequivocal character, therefore, is relevant to diagnose *Scutogyrus*.
- Size of uncinuli pairs III-VII: the gap between large and small standardized sizes of uncinuli pairs III-VII is located near 2 (Fig. 1B).
- Size of uncinuli pair I: the gap between large and small standardized sizes of uncinuli pairs I is located near 1.7 (Fig. 1C).

| | |
|--|--------------------------------|
| 1. One transverse bar (ventral) | 2 |
| — More than one transverse bar (ventral and dorsal) | 3 |
| 2. One asymmetrical pair of anchors (ventral) (Fig. 2A) | <i>Urogyrus</i> |
| — Two pairs of symmetrical anchors (Fig. 2B) | <i>Enterogyrus</i> |
| 3. Two transverse bars (one dorsal and one ventral) | 4 |
| — Three transverse bars (one dorsal, two ventral) (Fig. 2C) | 15 <i>Onchobdella</i> |
| 4. Dorsal bar with wings (= auricles) (Fig. 2D, a) | 5 |
| — Dorsal bar lacking wings (Fig. 2D, b) | 13 <i>Insulacleidus</i> |
| 5. Dorsal bar winged with very long auricles, ventral bar associated with a plate (Fig. 2E) | 22 <i>Scutogyrus</i> |
| — Dorsal bar with short auricles ventral bar not associated with a plate (Fig. 2F) | 27 <i>Cichlidogyrus</i> |
| 6. Dorsal anchor total length more than 50 μm , ventral bar straight, more than 40 μm (Fig. 3A, a) | 7 |
| — Dorsal anchor total length less than 50 μm , ventral bar V-shaped, less than 40 μm (Fig. 3A, b) | 8 |
| 7. Ventral anchor total length less than 27 μm | <i>Enterogyrus malmbergi</i> |
| — Ventral anchor total length more than 34 μm | <i>Enterogyrus crassus</i> |
| 8. Dorsal anchor with shaft longer than blade (Fig. 3B, a) | 9 |
| — Dorsal anchor with shaft shorter than blade (Fig. 3B, b) | 11 |
| 9. Haptor cup-shaped | <i>Enterogyrus cichlidarum</i> |
| — Haptor in two parts: one bulbous and one peduncular shaped (Fig. 3C) | 10 |
| 10. Penis with distal turns well separated (Fig. 3D, a) | <i>Enterogyrus coronatus</i> |
| — Penis with distal turns adjoining (Fig. 3D, b) | <i>Enterogyrus foratus</i> |

11. Ventral bar total length less than 14 µm *Enterogyrus amieti*
 — Ventral bar total length more than 16 µm 12
12. Penis with 3-2-3 turns (Fig. 3E, a) *Enterogyrus melenensis*
 — Penis with 6-2-4 turns (Fig. 3E, b) *Enterogyrus barombiensis*
13. Looped penis (Fig. 4B, a) *Insulacleidus paratilapiae*
 — Straight penis (Fig. 4B, b) 14
14. Simple accessory piece (Fig. 4C, a) *Insulacleidus paretropli*
 — Accessory piece complex (Fig. 4C, b) *Insulacleidus ptychochromidis*
15. Dorsal bar clearly arched (M-shaped) (Fig. 5A, a) 16
 — Dorsal bar straight or slightly V-shaped (Fig. 5A, b) 19
16. Ventral bars longer than dorsal one (Fig. 5B, a) *Onchobdella pterigyalis*
 — Ventral bars shorter than dorsal one (Fig. 5B, b) 17
17. Penis J-shaped (Fig. 5C, a) *Onchobdella voltensis*
 — Penis long and sinuous or spirally coiled (Fig. 5C, b) 18
18. Penis sinuous, no visible vagina (Fig. 5D, a) *Onchobdella spirocirra*
 — Penis spirally coiled (4 to 5 turns), long and sinuous vagina (Fig. 5D, b) *Onchobdella bopeleti*
19. Dorsal bar slightly V-shaped, length more than 43 µm (Fig. 5E, a) ... *Onchobdella silverai*
 — Dorsal bar straight, length less than 40 µm (Fig. 5E, b) 20
20. Ventral anchor total length less than 11 µm (Fig. 5F, a) *Onchobdella melissa*
 — Ventral anchor total length more than 20 µm (Fig. 5F, b) 21
21. Penis thin, G-shaped, total length 80 µm (Fig. 5G, a) *Onchobdella krachii*
 — Penis large, J-shaped, total length less than 60 µm (Fig. 5G, b) *Onchobdella aframae*
22. Penis and vagina very long and thin (Fig. 6A, a) *Scutogyrus ecoutini*
 — Penis and vagina shorter (Fig. 6A, b) 23
23. Penis length more than 70 µm (Fig. 6B, a) 24
 — Penis length less than 70 µm (Fig. 6B, b) 25
24. Vagina tubular, thin-walled (Fig. 6C, a) *Scutogyrus bailloni*
 — Vagina large, thick-walled (Fig. 6C, b) *Scutogyrus gravivaginus*
25. Accessory piece ending in two curved pincer-like hooks (Fig. 6D, a) ... *Scutogyrus chikhii*
 — Accessory piece ending in pincers with one component hooked, the other blunt (Fig. 6D, b) 26
26. Accessory piece basal extension well marked (Fig. 6E, a) *Scutogyrus minus*
 — No accessory piece extension (Fig. 6E, b) *Scutogyrus longicornis*
27. Uncinuli pairs III-VII long ("standardised length" more than 2) (Fig. 7A, a) 28
 — Uncinuli pairs III-VII short ("standardised length" less than 2) (Fig. 7A, b) 53
28. Uncinuli pairs I large ("standardised length" more than 1.7) (Fig. 7B, a) 29
 — Uncinuli pairs I small ("standardised length" less than 1.7) (Fig. 7B, b) 30

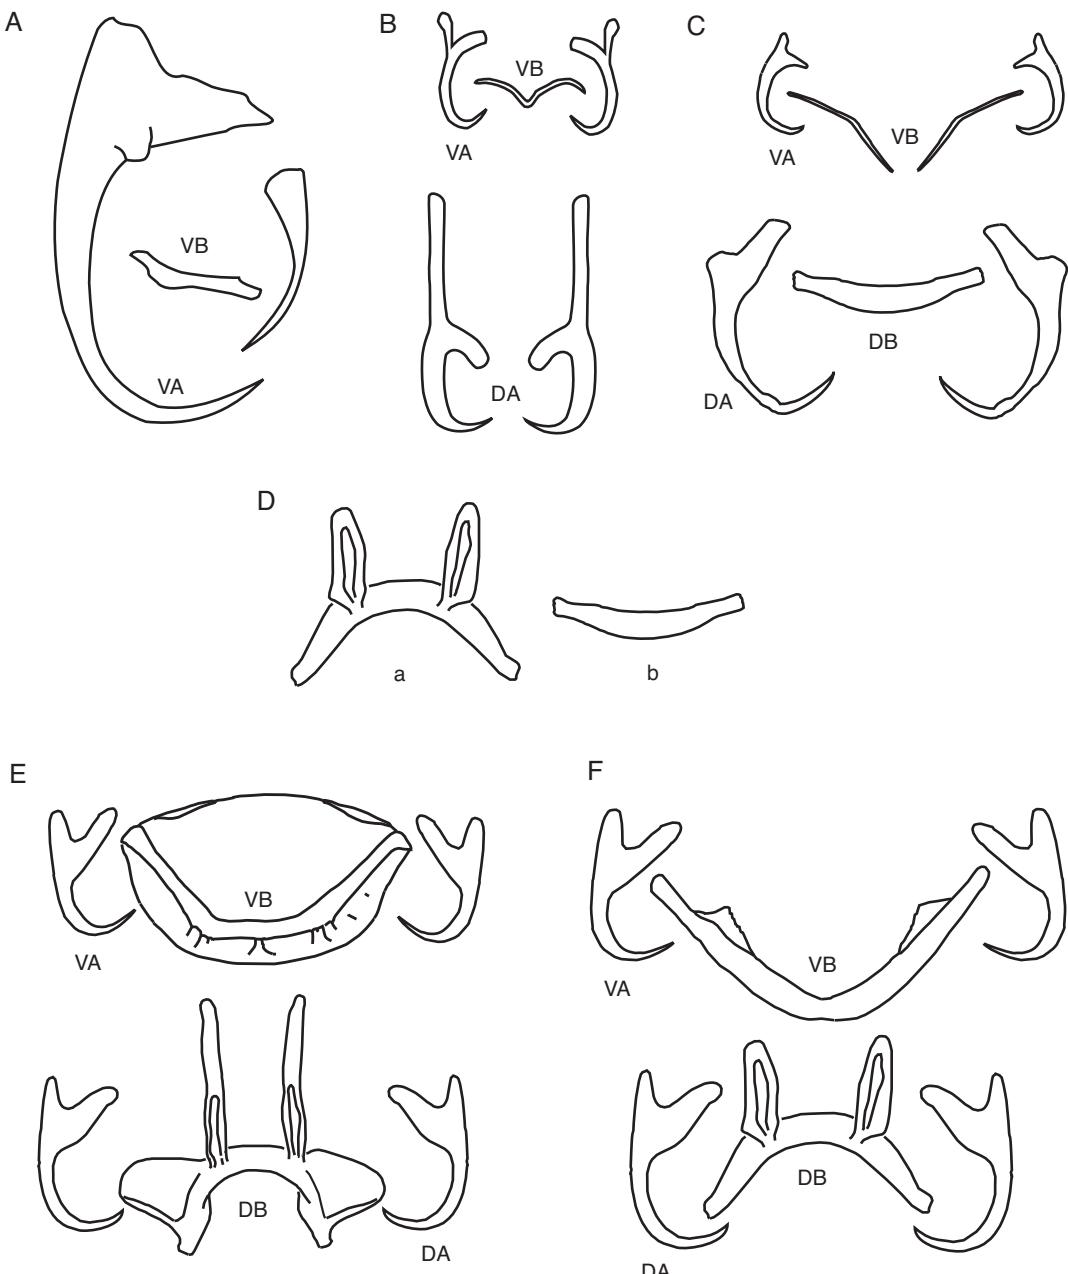

FIG. 2. — Illustration of the identification key for studied genera: **A**, haptoral morphology of *Urogyrus* Bilong Bilong, Birgi & Euzet, 1994 species; **B**, haptoral morphology of *Enterogyrus* Paperna, 1963 species; **C**, haptoral morphology of *Oncobdella* Paperna, 1968 species; **D**, shape of dorsal bars (not winged [**a**], winged [**b**]); **E**, haptoral morphology of *Scutogyrus* Pariselle & Euzet, 1995 species; **F**, haptoral morphology of *Cichlidogyrus* Paperna, 1960 species. Abbreviations: **DA**, dorsal anchor; **DB**, dorsal transverse bar; **VA**, ventral anchor; **VB**, ventral transverse bar.

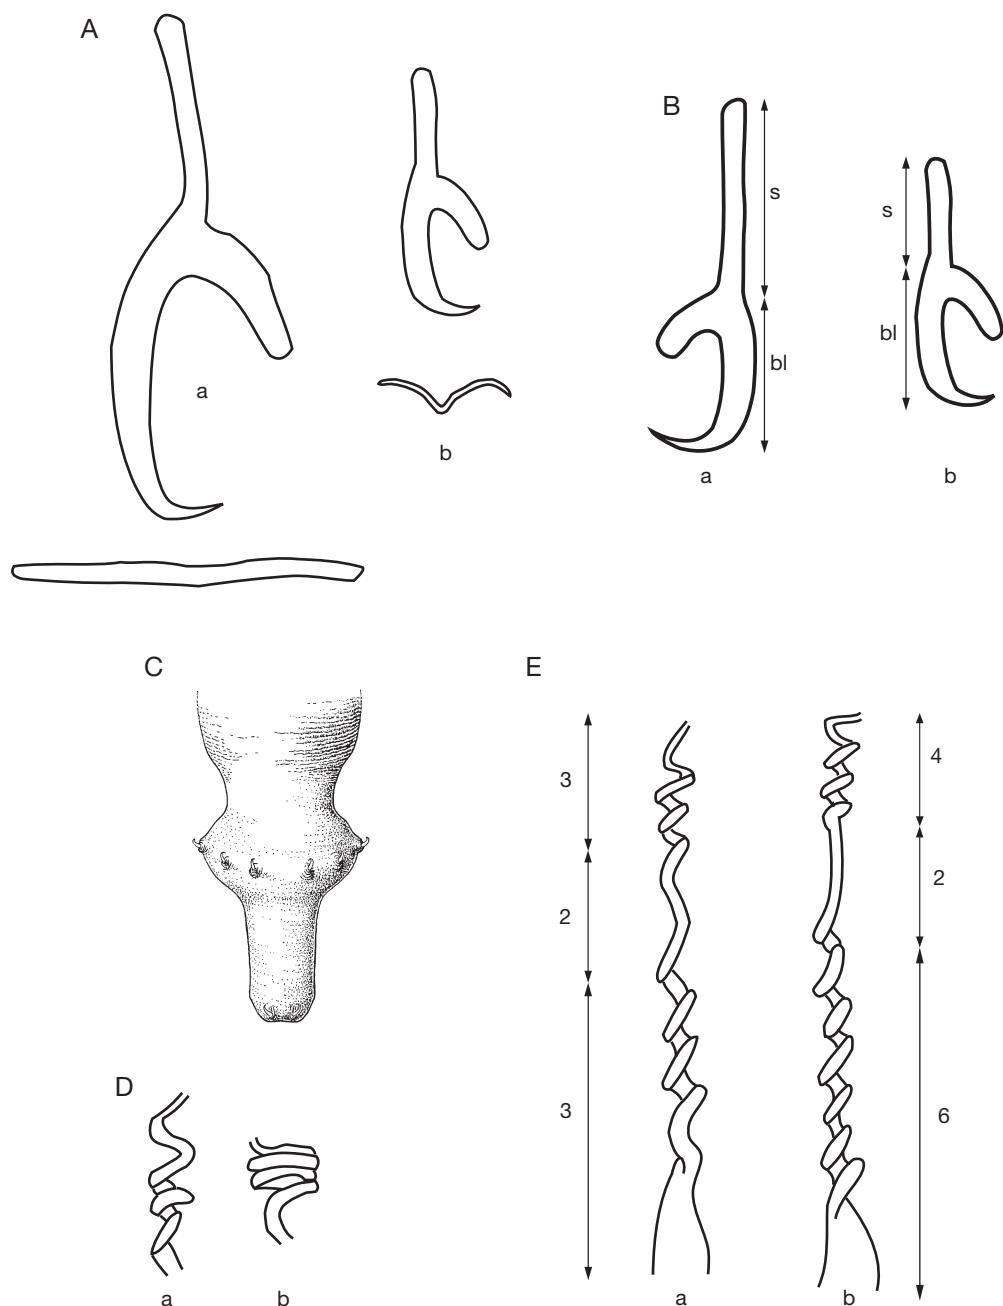

FIG. 3. — Illustration of identification key for *Enterogyrus* Paperna, 1963 species: **A**, size of dorsal anchor (large [**a**], small [**b**]) and shape of dorsal transverse bar (straight [**a**], V-shaped [**b**])); **B**, relative length of dorsal anchor blade and shaft (long shaft [**a**], short shaft [**b**])); **C**, morphology of haptor with bulbous and peduncular parts; **D**, penis distal turns (separated [**a**] or adjoining [**b**]); **E**, number of turns in the different parts of the penis. Abbreviations: **bl**, blade; **s**, shaft; **2**, **3**, **4** and **6**, number of turns in the parts of the penis.

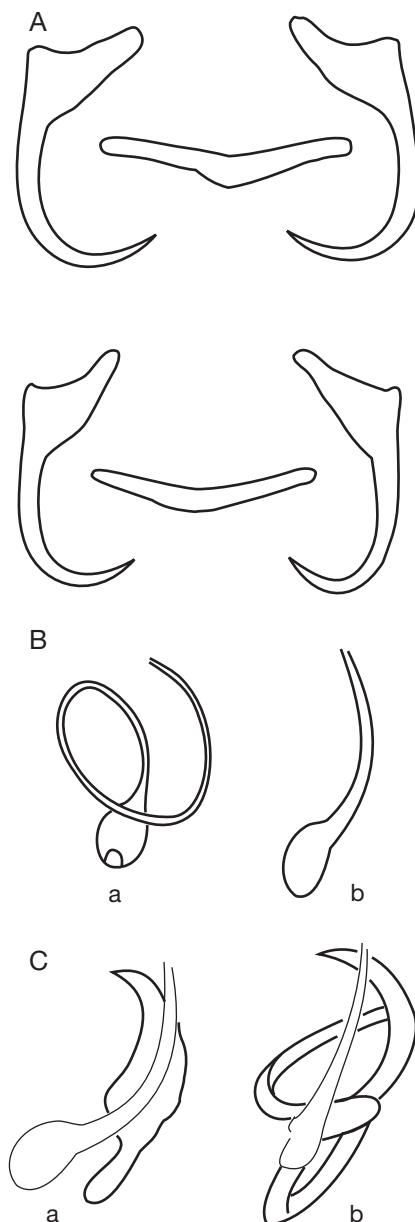

FIG. 4. — Illustration of identification key for *Insulacleidus* Rakotofiringa & Euzet, 1983 species: **A**, haptor morphology; **B**, shape of the penis (looped [a], straight [b]); **C**, shape of the accessory piece (simple [a], complex [b]).

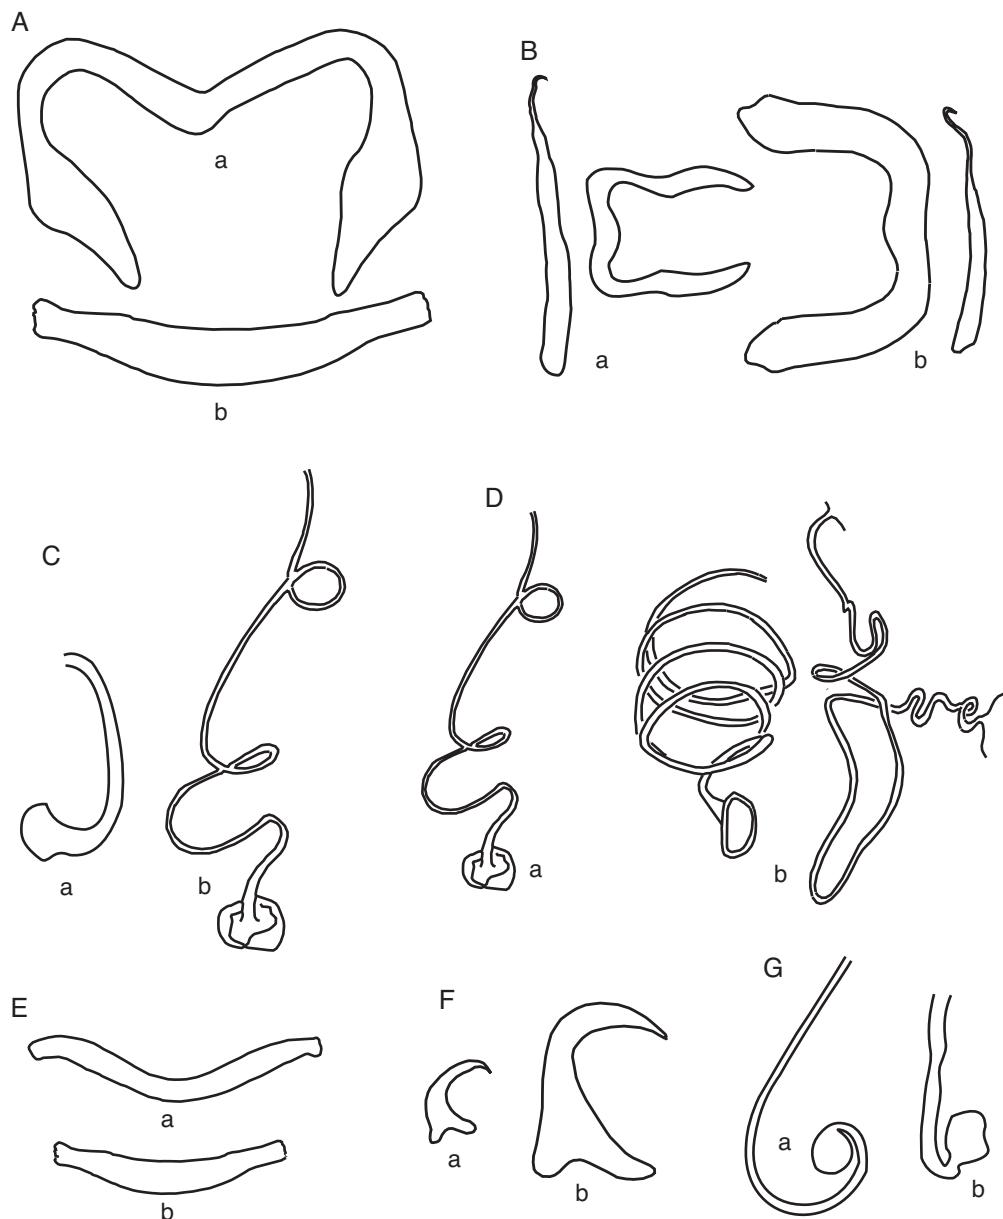

FIG. 5. — Illustration of identification key for *Onchobdella* Paperna, 1968 species: **A**, shape of dorsal transverse bar (arched [a], straight or V-shaped [b]); **B**, relative length of dorsal and ventral bars (ventral > dorsal [a], ventral < dorsal [b]); **C**, shape of penis (J-shaped [a], sinuous or spirally coiled [b]); **D**, shape of penis (sinuous [a], spirally coiled [b]); **E**, shape and size of dorsal bar (long and V-shaped [a], short and straight [b]); **F**, size of ventral anchor (small [a], large [b]); **G**, shape of the penis (G-shaped [a], J-shaped [b]).

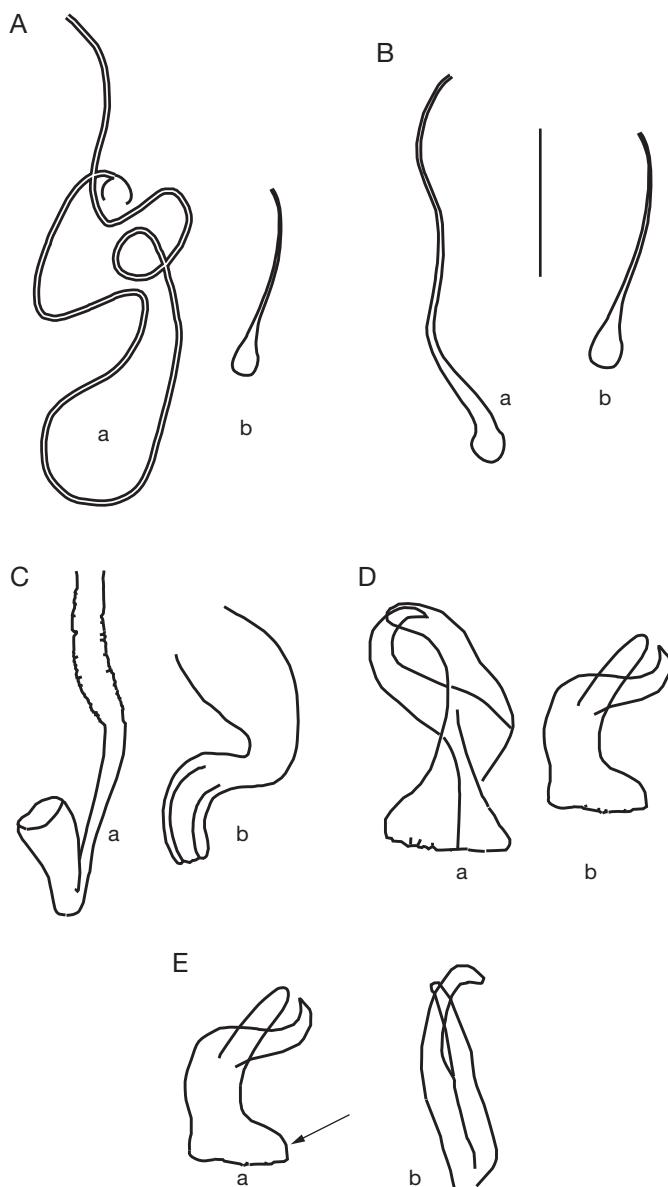

FIG. 6. — Illustration of identification key for *Scutogyrus* Pariselle & Euzet, 1995 species: **A**, size of the penis (long [a], short [b]); **B**, size of the penis (long [a], short [b]); **C**, shape of the vagina (tubular and thin-walled [a], large and thick-walled [b]); **D**, shape of the accessory piece ending (two curved pincer-like hooks [a], one component hooked, the other blunt [b]); **E**, shape of the accessory piece (basal extension well marked [a], no extension [b]). Scale bar: 30 µm.

| | |
|--|------------------------------------|
| 29. Vagina not visible, single-looped penis (Fig. 7C, a) | <i>Cichlidogyrus arthracanthus</i> |
| — Sclerotised vagina, curved penis (Fig. 7C, b) | <i>Cichlidogyrus inconsultans</i> |
| 30. Very large body and sclerite size, large and S-shaped penis (Fig. 7D, a) ... | <i>Cichlidogyrus halli</i> |
| — Other penis shapes (Fig. 7D, b) | 31 |
| 31. Male apparatus auxiliary plate(s) present (Fig. 8A, a) | 32 |
| — Male apparatus without auxiliary plate (Fig. 8A, b) | 39 |
| 32. Presence of two small auxiliary plates (Fig. 8B, a) | <i>Cichlidogyrus guirali</i> |
| — Presence of one auxiliary plate (Fig. 8B, b) | 33 |
| 33. Reduced auxiliary plate (smallest axis < 10 µm) (Fig. 8C, a) ... | <i>Cichlidogyrus microscutus</i> |
| — Large auxiliary plate (smallest axis > 10 µm) (Fig. 8C, b) | 34 |
| 34. Accessory piece slightly S-shaped, ending bottle-opener-like (Fig. 8D, a) | <i>Cichlidogyrus thurstonae</i> |
| — Accessory piece bent at right angle (Fig. 8D, a) | 35 |
| 35. Penis length less than 80 µm | 36 |
| — Penis length more than 95 µm | 38 |
| 36. Extremity of accessory piece with large perpendicular diverticules, vagina thin walled and amphora-shaped (Fig. 8E, a) | <i>Cichlidogyrus aegypticus</i> |
| — Extremity of accessory piece without large perpendicular diverticules (Fig. 8E, b) | 37 |
| 37. Accessory piece convex face with large semi-circular extension (Fig. 8F, a) | <i>Cichlidogyrus gallus</i> |
| — Accessory piece convex face without large semi-circular extension (Fig. 8F, b) | <i>Cichlidogyrus paganoi</i> |
| 38. Penis length less than 105 µm, vagina length less than 50 µm | <i>C. bilongi</i> |
| — Penis length more than 130 µm, vagina length more than 60 µm | <i>C. agnesi</i> |
| 39. Long and narrow vagina (Fig. 9A, a) | 40 |
| — Large and/or short vagina (Fig. 9A, b) | 42 |
| 40. Penis length more than 85 µm, | <i>Cichlidogyrus flexicolpos</i> |
| — Penis length less than 60 µm | 41 |
| 41. Accessory piece T-shaped (Fig. 9B, a) | <i>Cichlidogyrus testificatus</i> |
| — Accessory piece ending in a hook (Fig. 9B, b) | <i>Cichlidogyrus lemoallei</i> |
| 42. Short conical and right angle folded vagina (Fig. 9C, a) | 43 |
| — Tubular vagina (almost constant diameter) (Fig. 9C, b) | 46 |
| 43. Penis length less than 61 µm | 44 |
| — Penis length more than 65 µm | 45 |
| 44. Accessory piece ending with smooth convex face (Fig. 9D, a) | <i>Cichlidogyrus bouvii</i> |
| — Accessory piece ending in a bifurcated hook with crenulated convex face (Fig. 9D, b) ... | <i>Cichlidogyrus dossoui</i> |
| 45. Accessory piece ending folded back (Fig. 9E, a) | <i>Cichlidogyrus vexus</i> |
| — Accessory piece ending in a hook (Fig. 9E, b) | <i>Cichlidogyrus douellouae</i> |

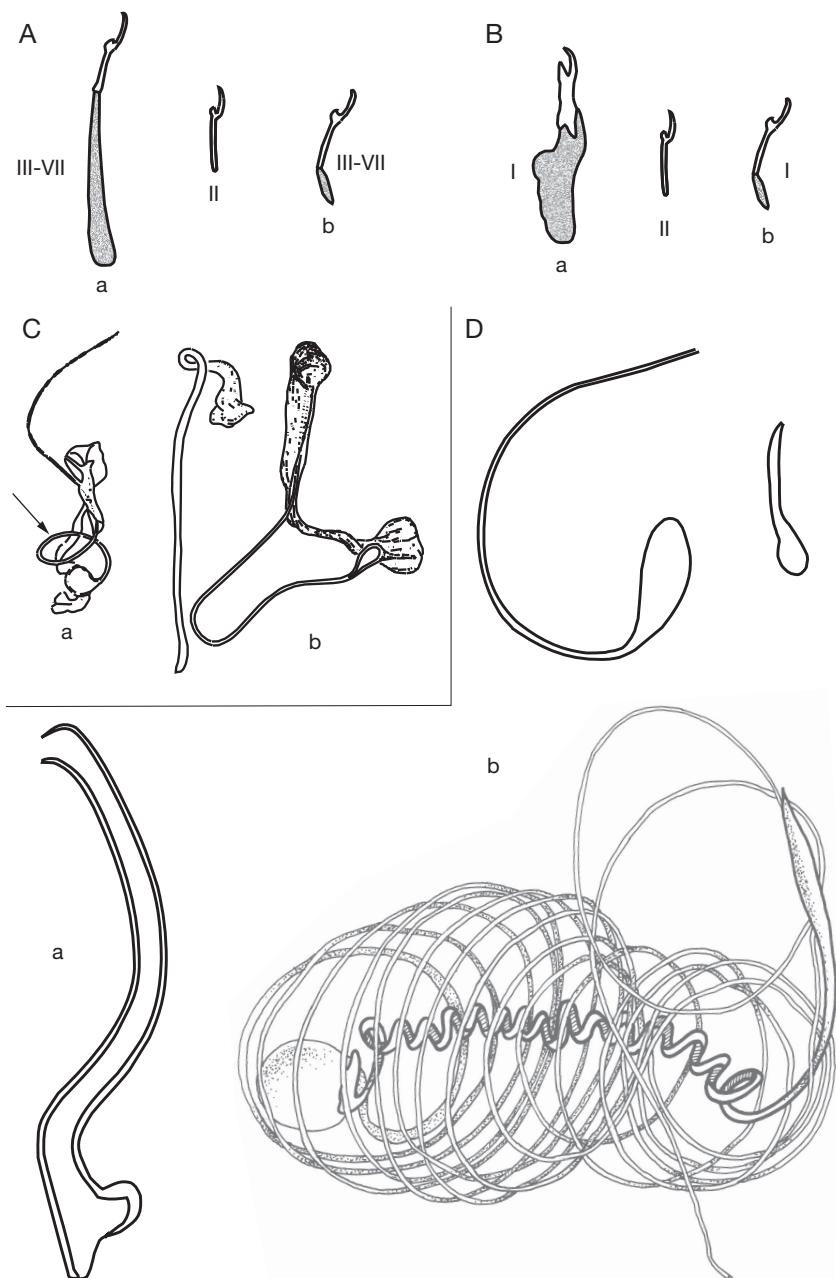

FIG. 7. — Illustration of identification key for *Cichlidogyrus* Paperna, 1960 species: **A**, length of uncinuli III to VII (long [a], short [b], pair II is given as a reference); **B**, size of uncinuli I (large [a], small [b], pair II is given as a reference); **C**, *C. arthracanthus* Paperna, 1960 penis (a); *C. inconsutans* (Birgi & Lambert, 1986) sclerotised genitalia (b); **D**, shape of penis (*C. halli* (Price & Kirk, 1967) [a], other species [b]). Abbreviations: I, II and III-VII, uncinuli numbering.

|--|------------------------------------|
| 46. Short annulated vagina (Fig. 9F, a) | <i>Cichlidogyrus hemi</i> |
| — Vagina with smooth wall (Fig. 9F, b) | 47 |
| 47. Straight or slightly curved vagina (Fig. 10A, a) | <i>Cichlidogyrus legendrei</i> |
| — Well curved or looped vagina (Fig. 10A, b) | 48 |
| 48. Loopd vagina (Fig. 10B, a) | 49 |
| — Curved vagina (not looped) (Fig. 10B, b) | 51 |
| 49. Vagina forming a single loop (Fig. 10C, a) | <i>Cichlidogyrus tiberianus</i> |
| — Vagina forming two semi-loops (Fig. 10C, b) | 50 |
| 50. Vagina semi-loops in the same plane, crenulated distal accessory piece extremity (Fig. 10D, a) | <i>Cichlidogyrus kouassii</i> |
| — Vagina semi-loops in perpendicular planes, accessory piece distal extremity with a single hook (Fig. 10D, b) | <i>Cichlidogyrus bonhommei</i> |
| 51. Curved accessory piece ending in two points, vagina with characteristic enlargement (Fig. 10E, a) | <i>Cichlidogyrus anthemocolpos</i> |
| — Accessory piece bent at right angle, ending in a single point, vagina without enlargement (Fig. 10E, b) | 52 |
| 52. Accessory piece with triangular extension at proximal third (Fig. 10F, a) | <i>Cichlidogyrus ergensi</i> |
| — Accessory piece without triangular extension at proximal third (Fig. 10F, b) | <i>Cichlidogyrus ouedraogoi</i> |
| 53. Auricles reduced, in continuity with dorsal bar anterior face (Fig. 11A, a) | 54 |
| — Auricles developed (Fig. 11A, b) | 56 |
| 54. Uncinulus I “standardised length” more than 2 (Fig. 11B, a) | <i>Cichlidogyrus kothiasi</i> |
| — Uncinulus I “standardised length” less than 2 (Fig. 11B, b) | 55 |
| 55. Accessory piece with narrow base, penis with large heel (Fig. 11C, a) ... | <i>Cichlidogyrus berrebii</i> |
| — Accessory piece with wide base, penis with thin heel (Fig. 11C, b) ... | <i>Cichlidogyrus pouyaudi</i> |
| 56. Uncinulus I “standardised length” more than 2 (Fig. 11D, a) | 57 |
| — Uncinulus I “standardised length” less than 2 (Fig. 11D, b) | 76 |
| 57. Penis with swollen portion (Fig. 11E, a) | 58 |
| — Penis without swollen portion (thin and tubular all along) (Fig. 11E, b) | 59 |
| 58. Penis length less than 35 µm | <i>Cichlidogyrus papernastrema</i> |
| — Penis length more than 45 µm | <i>Cichlidogyrus philander</i> |
| 59. Penis length less than 50 µm | 60 |
| — Penis length more than 60 µm | 69 |
| 60. Sclerotised vagina | 61 |
| — Vagina not visible | 62 |
| 61. Penis with developed heel, accessory piece S-shaped (Fig. 11F, a) ... | <i>Cichlidogyrus dageti</i> |
| — Penis with poorly developed heel, accessory piece C-shaped (Fig. 11F, b) | <i>Cichlidogyrus falcifer</i> |

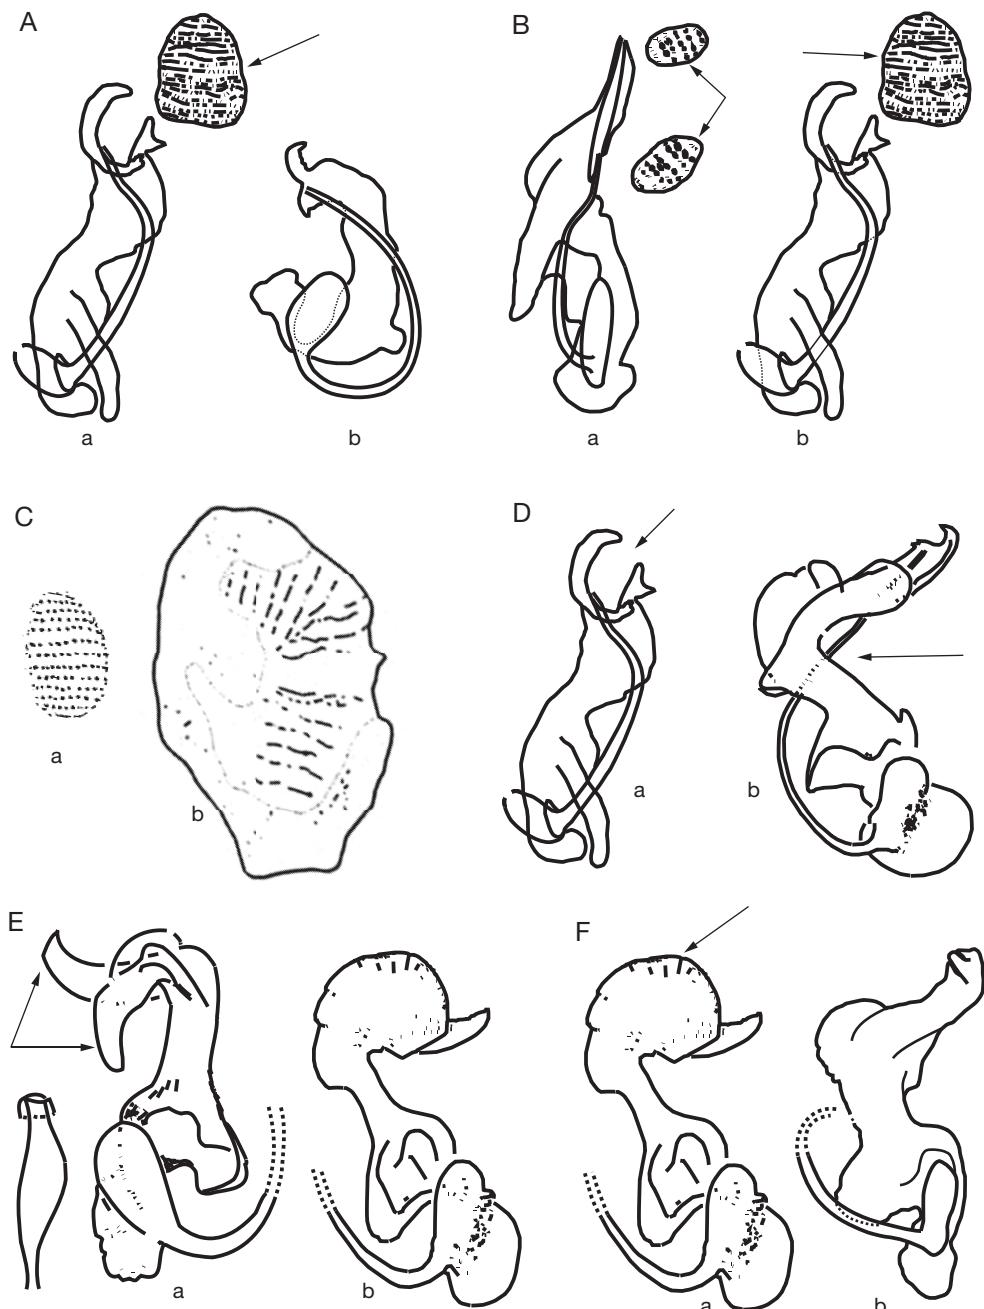

FIG. 8. — Illustration of identification key for *Cichlidogyrus* Paperna, 1960 species: A, presence (a) or absence (b) of an auxiliary plate associated with the male apparatus; B, presence of two (a) or one (b) auxiliary plate associated with the male apparatus; C, size of the auxiliary plate associated with the male apparatus (small [a], large [b]); D, shape of the accessory piece (S-shaped [a], bent at right angle [b]); E, shape of the extremity of the accessory piece (presence [a] or absence [b] of large perpendicular diverticula); F, shape of the accessory piece convex face (presence [a] or absence [b] of a large semi-circular extension).

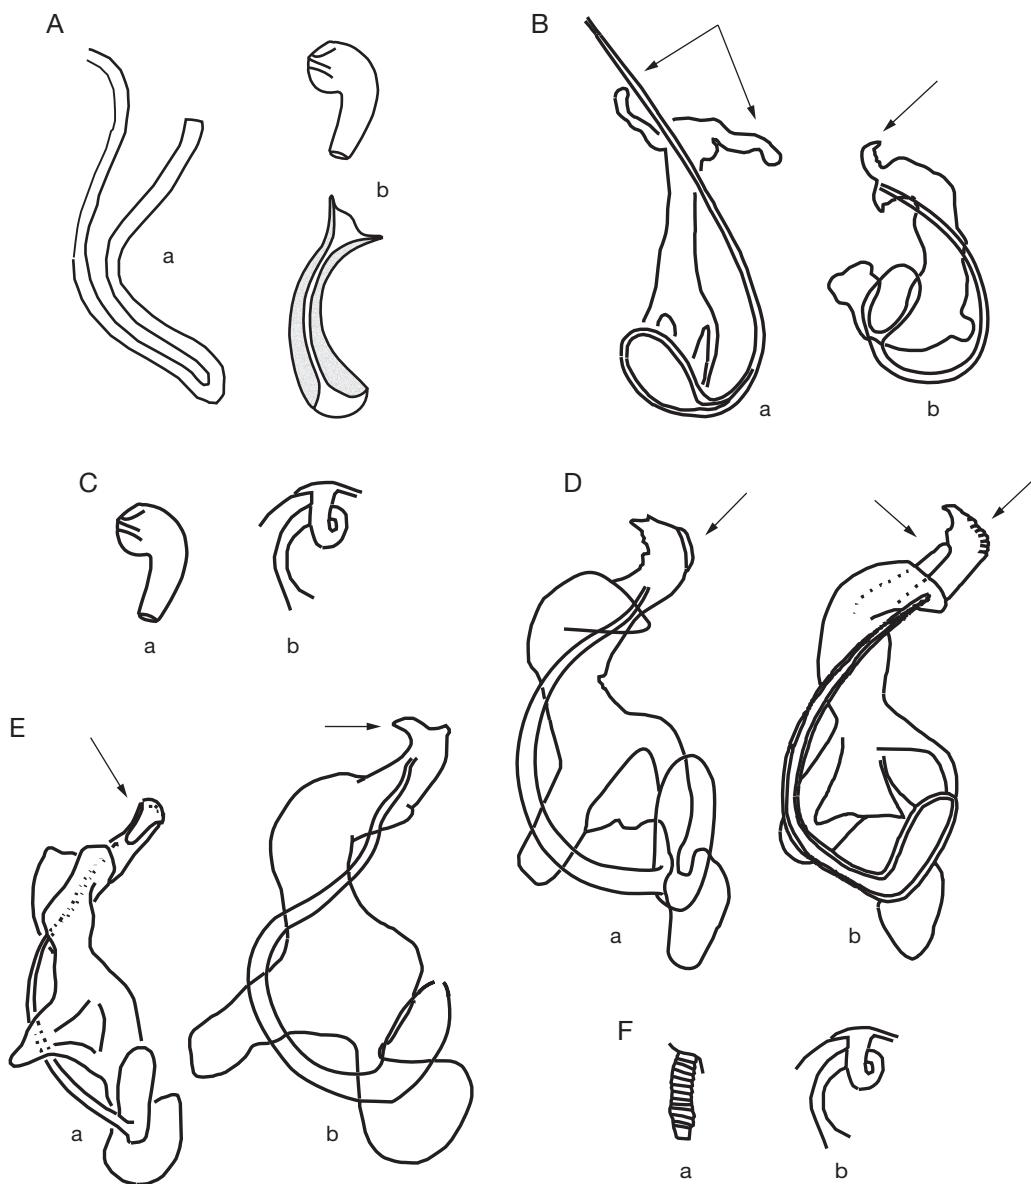

FIG. 9. — Illustration of identification key for *Cichlidogyrus* Paperna, 1960 species: **A**, shape of the sclerotised vagina (long and narrow [a], large and/or short [b]); **B**, shape of the accessory piece (T-shaped [a], ending in a hook [b]); **C**, shape of the vagina (short conical and right angle folded [a], tubular [b]); **D**, shape of the accessory piece ending convex face (smooth [a], crenulated [b]); **E**, shape of the accessory piece ending (folded back [a], hook shaped [b]); **F**, shape of vagina wall (annulated [a], smooth [b]).

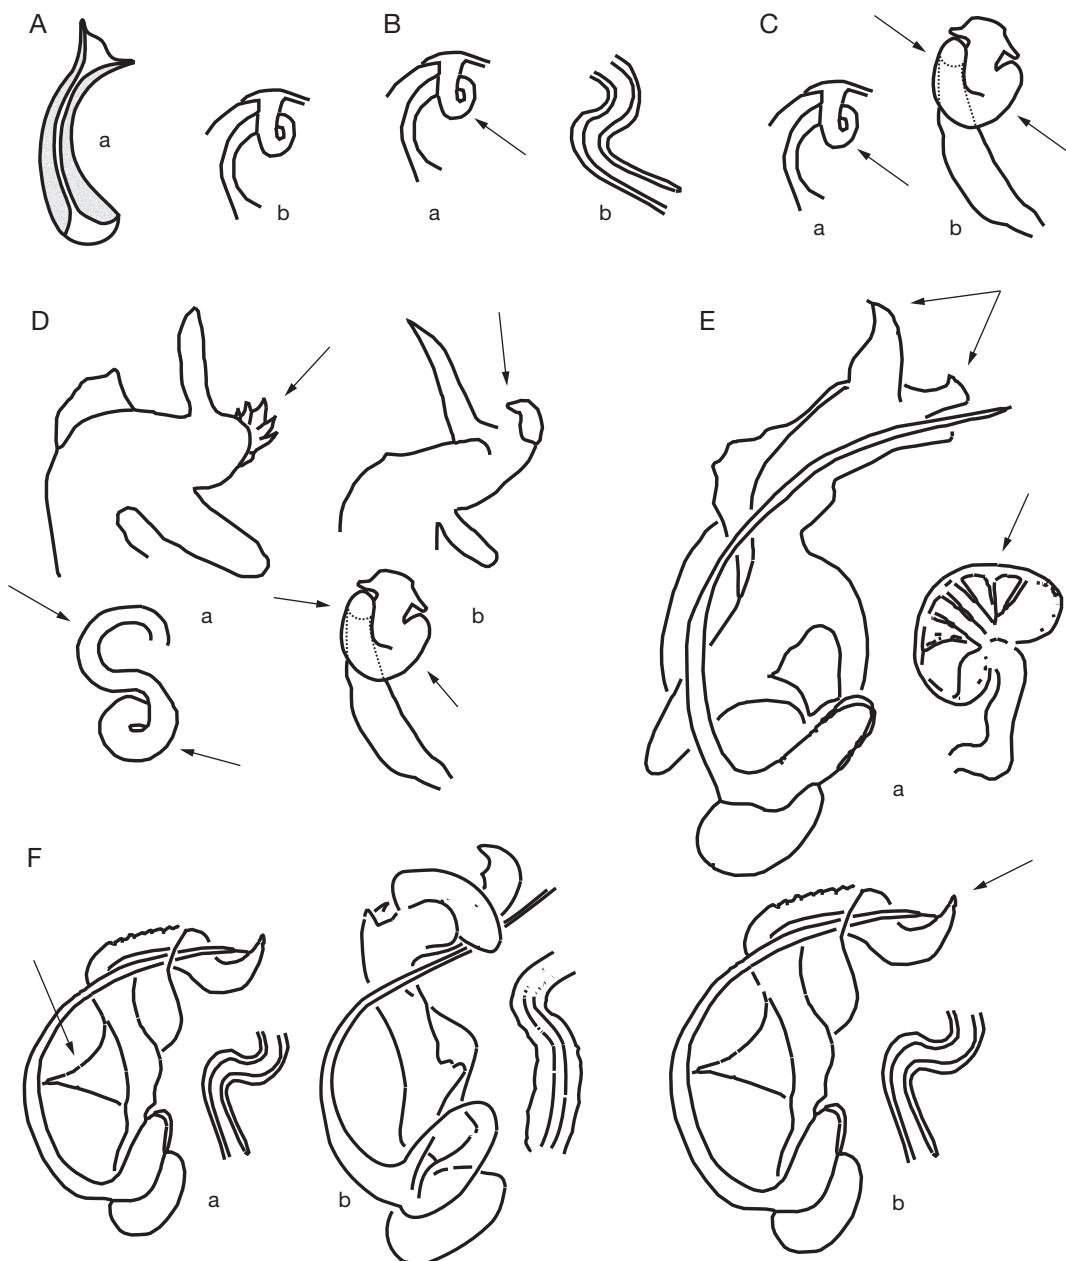

FIG. 10. — Illustration of identification key for *Cichlidogyrus* Paperna, 1960 species: **A**, shape of the vagina (straight or slightly curved [a], well curved or looped [b]); **B**, shape of the vagina (looped [a], curved [b]); **C**, shape of vagina (one [a] or two semi [b] loops); **D**, shape of vagina and accessory piece extremity (semi-loops in the same plane and crenulated [a], semi-loops in perpendicular planes and single-hooked [b]); **E**, shape of accessory piece extremity and vagina (ending in two points and characteristic enlargement [a], ending in a single point and no enlargement [b]); **F**, presence (a) or absence (b) of a triangular extension at proximal third of the accessory piece.

| | |
|---|----------------------------------|
| 62. Accessory piece forming a large gutter-like portion at its base (Fig. 12A, a) | <i>Cichlidogyrus nuniezi</i> |
| — Narrow accessory piece (Fig. 12A, b) | 63 |
| 63. Accessory piece with a rounded bulge at distal third (Fig. 12B, a) | <i>Cichlidogyrus dionchus</i> |
| — Accessory piece without a rounded bulge at distal third (Fig. 12B, b) | 64 |
| 64. Accessory piece with double ending (Fig. 12C, a) | <i>Cichlidogyrus digitatus</i> |
| — Accessory piece with single ending (Fig. 12C, b) | 65 |
| 65. Accessory piece ending in a thin and long hook (Fig. 12D, a) | <i>Cichlidogyrus berradae</i> |
| — Accessory piece ending in a wide and short hook (Fig. 12D, b) | 66 |
| 66. Penis with large and rounded heel (Fig. 12E, a) | 67 |
| — Penis with narrow heel (Fig. 12E, b) | 68 |
| 67. Penis extremity folded back, accessory piece closed C-shaped (Fig. 12F, a) | <i>Cichlidogyrus reversati</i> |
| — Penis and accessory piece open C-shaped (Fig. 12F, b) | <i>Cichlidogyrus halinus</i> |
| 68. Accessory piece > 27 µm (Fig. 12G, a) | <i>Cichlidogyrus yanni</i> |
| — Accessory piece < 26 µm (Fig. 12G, b) | <i>Cichlidogyrus quaestio</i> |
| 69. Spirally coiled penis, length more than 350 µm (Fig. 13A, a) | 70 |
| — Not spirally coiled penis, length less than 150 µm (Fig. 13A, b) | 72 |
| 70. Penis with 4 or 5 turns, not spirally coiled vagina (Fig. 13B, a) | <i>Cichlidogyrus euzeti</i> |
| — Penis with more than 4 or 5 turns, spirally coiled vagina (Fig. 13B, b) | 71 |
| 71. Penis with 8 or 9 turns, length about 450 µm (Fig. 13C, a) | <i>Cichlidogyrus longicirrus</i> |
| — Penis with 14 or 15 turns, length about 1500 µm (Fig. 13C, b) ... | <i>Cichlidogyrus sanseoi</i> |
| 72. Penis with large diameter, slightly sinuous, without heel (Fig. 13D, a) | <i>Cichlidogyrus arfi</i> |
| — Filiform penis (Fig. 13D, b) | 73 |
| 73. Nearly straight penis (Fig. 13E, a) | <i>Cichlidogyrus albareti</i> |
| — Curved penis (Fig. 13E, b) | 74 |
| 74. G-shaped penis (Fig. 13F, a) | <i>Cichlidogyrus teugelsi</i> |
| — Single-looped penis (Fig. 13F, b) | 75 |
| 75. Long vagina, accessory piece round ended (Fig. 14A, a) | <i>Cichlidogyrus nandidae</i> |
| — Short vagina, accessory piece ending in a hook (Fig. 14A, b) ... | <i>Cichlidogyrus bychowskii</i> |
| 76. Penis with swollen portion (Fig. 14B, a) | 77 |
| — Tubular penis without swollen portion (Fig. 14B, b) | 84 |
| 77. Well marked swollen portion (Fig. 14C, a) | 78 |
| — “Diffuse” swollen portion (Fig. 14C, b) | 82 |
| 78. Penis length less than 60 µm | 79 |
| — Penis length more than 80 µm | 81 |

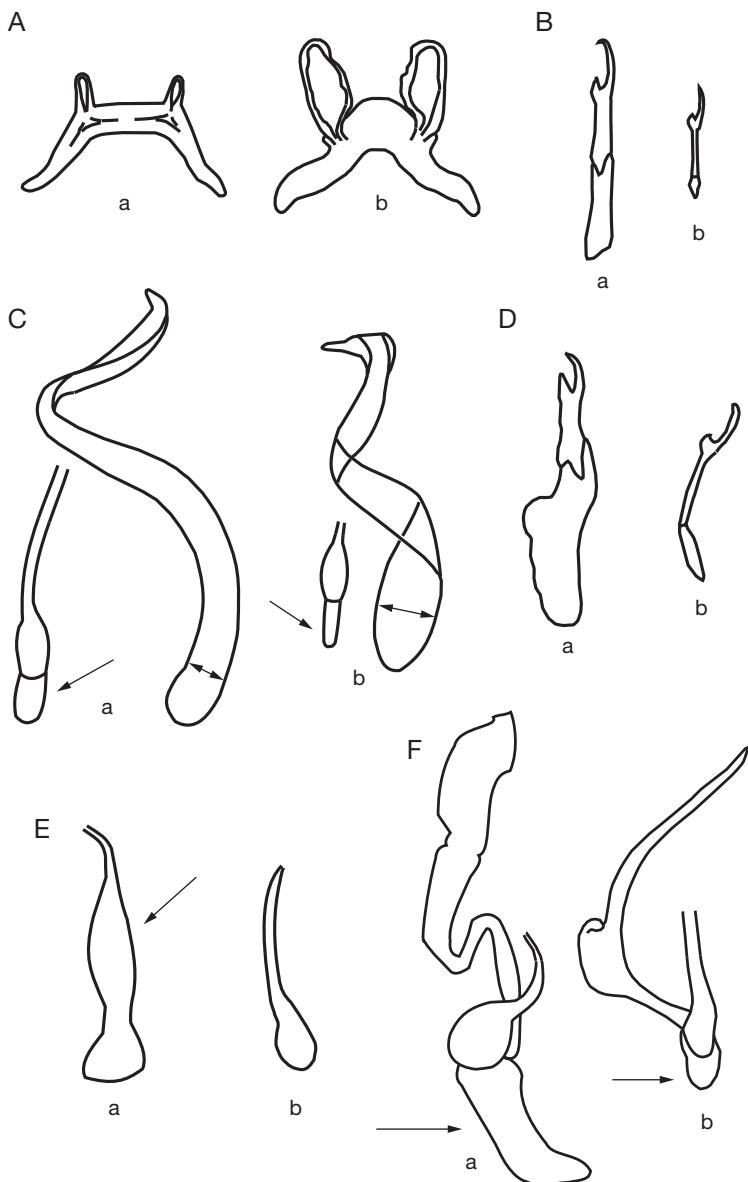

FIG. 11. — Illustration of identification key for *Cichlidogyrus* Paperna, 1960 species; A, size of auricle on the dorsal bar (reduced [a], developed [b]); B, relative size of uncinulus pair I (large [a], small [b]); C, shape of the accessory piece base and penis heel (narrow and large [a], wide and thin [b]); D, relative size of uncinulus pair I (large [a], small [b]); E, presence (a) or absence (b) of a swollen portion in the penis; F, size of the penis heel and of the accessory piece (well developed and S-shaped [a], poorly developed and c-shaped [b]).

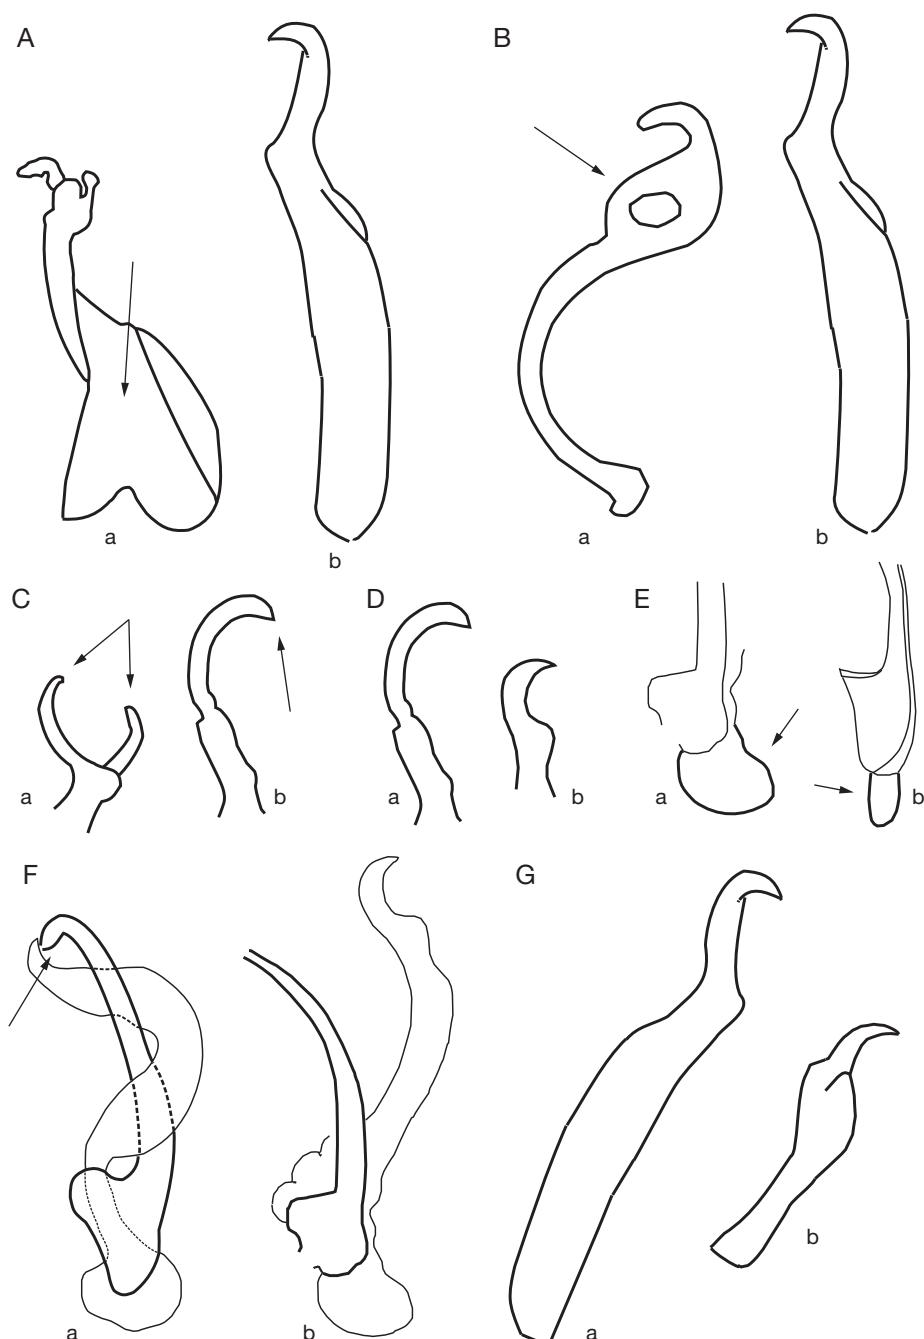

FIG. 12. — Illustration of identification key for *Cichlidogyrus* Paperna, 1960 species: **A**, shape of the accessory piece base (gutter-like [a], narrow [b]); **B**, presence (a) or absence (b) of a round bulge at distal third of the accessory piece; **C**, shape of the accessory piece ending (double [a], single [b]); **D**, shape of the accessory piece ending hook (thin and long [a], wide and short [b]); **E**, shape of penis heel (wide [a], narrow [b]); **F**, shape of penis extremity and accessory piece (folded back and close C [a], straight and open C [b]); **G**, size of accessory piece (long [a], short [b]).

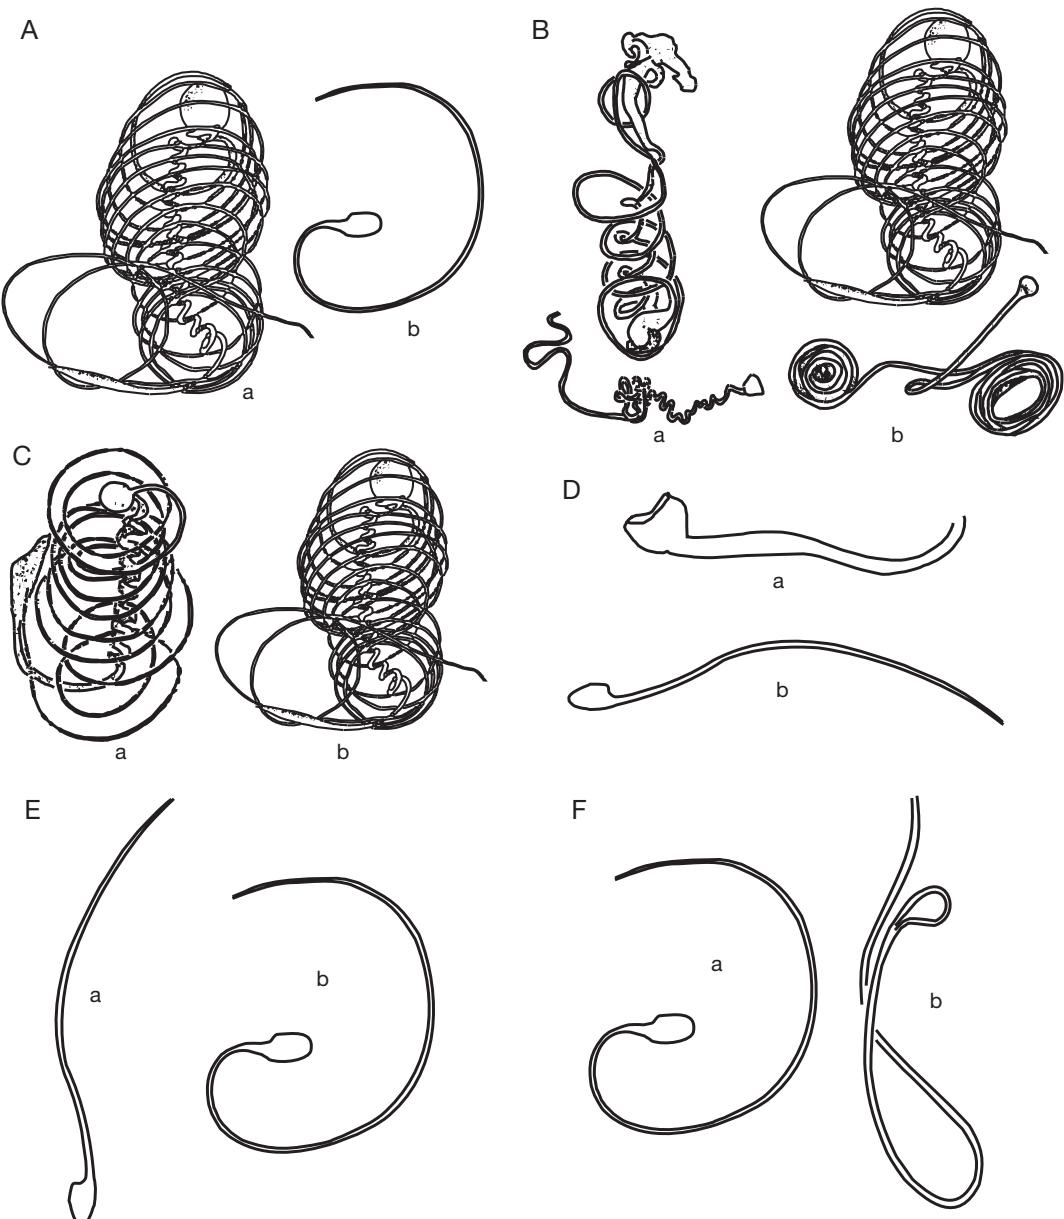

FIG. 13. — Illustration of identification key for *Cichlidogyrus* Paperna, 1960 species: **A**, shape of the penis (spirally coiled [a], not spirally coiled [b]); **B**, number of turns in spirally coiled penis and shape of the sclerotised vagina (4-5 and sinuous [a], more than 4-5 and spirally coiled [b]); **C**, number of turns in spirally coiled penis (8-9 [a], 14-15 [b]); **D**, penis diameter (large [a], filiform [b]); **E**, shape of the penis (straight [a], curved [b]); **F**, shape of the penis (G [a], single looped [b]).

79. No visible vagina, developed swollen portion (more than half penis total length) (Fig. 14D,
 a) *Cichlidogyrus sanjeani*
- Visible S-shaped vagina, reduced swollen portion (less than one fifth of penis total length)
 (Fig. 14D, b) 80
80. Accessory piece ending in a hook (Fig. 14E, a) *Cichlidogyrus amphoratus*
 — Accessory piece bifurcated, lined along convex face with tubercles (Fig. 14E, b)
 *Cichlidogyrus ornatus*
81. Accessory piece with heavily sclerotised portion L-shaped, uncinuli pairs II and III to VII
 (11 and 13 µm) (Fig. 14F, a) *Cichlidogyrus giostrai*
 — Accessory piece with heavily sclerotised portion C-shaped, uncinuli pairs II and III to VII
 (16 and 20 µm) (Fig. 14F, b) *Cichlidogyrus njinei*
82. Penis length less than 40 µm *Cichlidogyrus lagoonaris*
 — Penis length more than 55 µm 83
83. Short, large and conical vagina (Fig. 14G, a) *Cichlidogyrus zambezensis*
 — Short, thin and S-shaped vagina (Fig. 14G, b) *Cichlidogyrus karibae*
84. Penis length less than 60 µm 85
 — Penis length more than 60 µm 92
85. Sclerotised vagina 86
 — Vagina not visible 88
86. Single C-shaped accessory piece with a thin extension at its base (Fig. 15A, a)
 *Cichlidogyrus levequei*
 — Complex accessory piece with well-sclerotised C-shaped portion (Fig. 15A, b) 87
87. Accessory piece with a C-shaped portion sharply arched, with thin plates at each extremity
 (Fig. 15B, a) *Cichlidogyrus slembroucki*
 — Accessory piece with C-shaped portion slightly arched, without plates at its extremities,
 and a digitations at its middle (Fig. 15B, b) *Cichlidogyrus acerbus*
88. Penis with heel (Fig. 15C, a) 89
 — Penis without heel (Fig. 15C, b) 91
89. Very thin heel, accessory piece ending in claws (Fig. 15D, a) *Cichlidogyrus fontanai*
 — Developed heel, accessory piece with forked ending (Fig. 15D, b) 90
90. Penis length less than 40 µm, large dorsal bar auricles (Fig. 15E, a)
 *Cichlidogyrus rognoni*
 — Penis length more than 40 µm, dorsal bar auricles smaller (Fig. 15E, b)
 *Cichlidogyrus bifurcatus*
91. Penis length more than 40 µm, accessory piece thin at level of insertion on basal bulb
 (Fig. 15F, a) *Cichlidogyrus haplochromii*
 — Penis length less than 37 µm, accessory piece large at level of insertion (Fig. 15F, b)
 *Cichlidogyrus tilapiiae*
92. Accessory piece straight or slightly curved (Fig. 16A, a) 93
 — Accessory piece sharply curved (Fig. 16A, b) 95

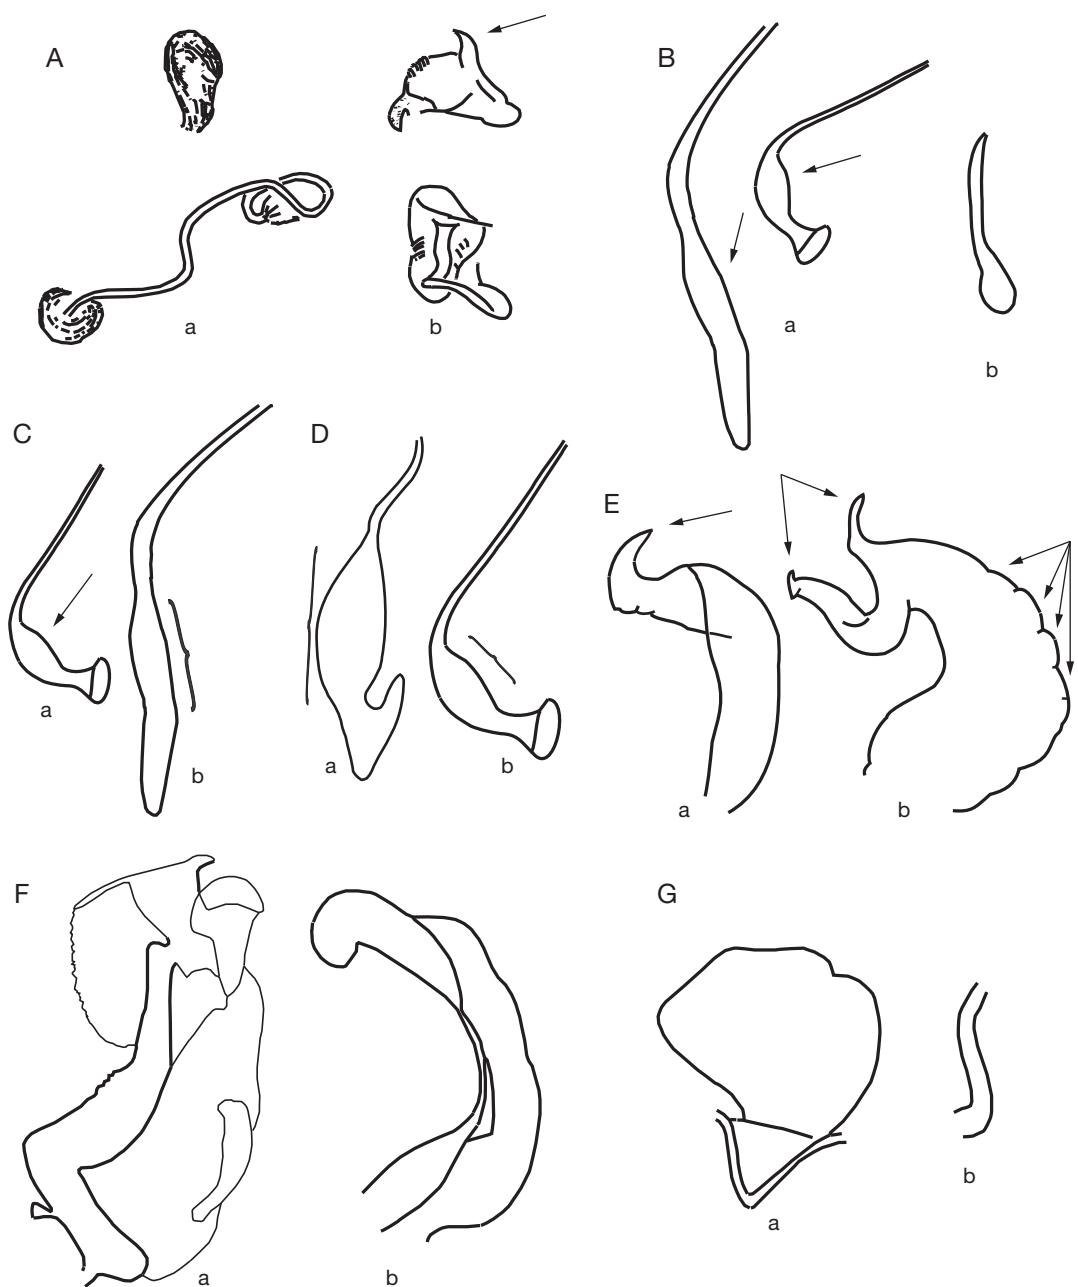

FIG. 14. — Illustration of identification key for *Cichlidogyrus* Paperna, 1960 species: **A**, size of the sclerotised vagina and shape of accessory piece ending (long and rounded [**a**], short and hooked [**b**]); **B**, presence (**a**) or absence (**b**) of a swollen portion in the penis; **C**, well marked (**a**) or diffuse (**b**) swollen portion in the penis; **D**, relative size of the swollen portion in the penis (developed [**a**], reduced [**b**]); **E**, shape of accessory piece ending (hooked [**a**], bifurcated [**b**]) and presence of tubercles along the convex face; **F**, shape of accessory piece heavily sclerotised portion (L [**a**], C [**b**]); **G**, shape of the sclerotised vagina (large and conical [**a**], thin and S-shaped [**b**]).

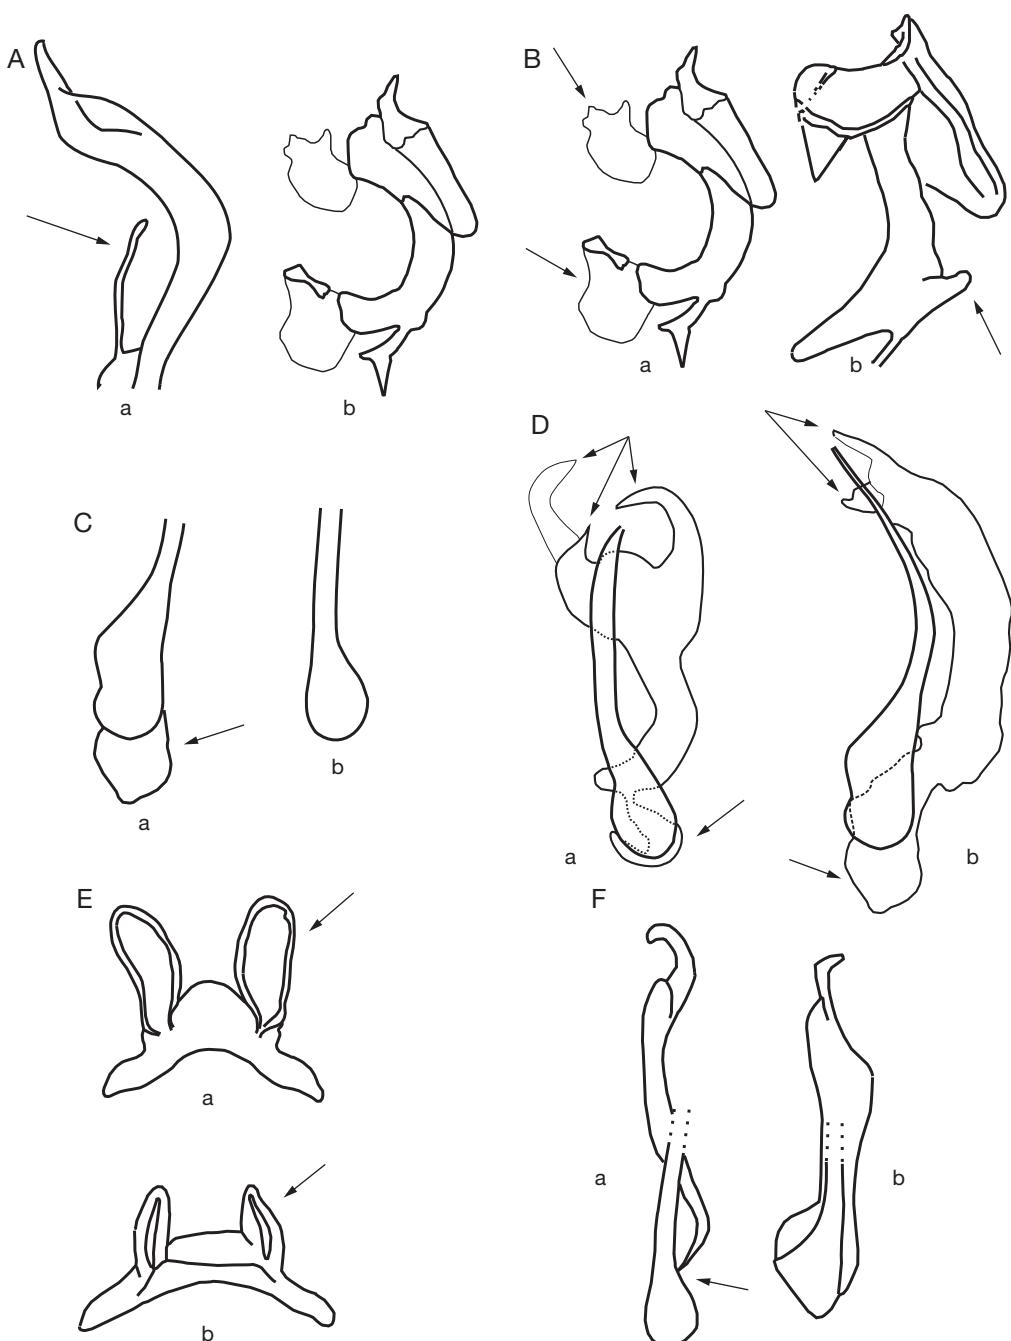

FIG. 15. — Illustration of identification key for *Cichlidogyrus* Paperna, 1960 species: A, shape of the accessory piece (simple with extension [a], complex [b]); B, presence (a) or absence (b) of thin plates at the extremity of the accessory piece; C, presence (a) or absence (b) of a penis heel; D, size of the penis heel and shape of the accessory piece ending (thin and presence of claws [a], developed and forked [b]); E, size dorsal bar auricles (large [a], small [b]); F, size of the penis and width of accessory piece insertion at the level of the penis (more than 40 µm and thin [a], less than 37 µm and large [b]).

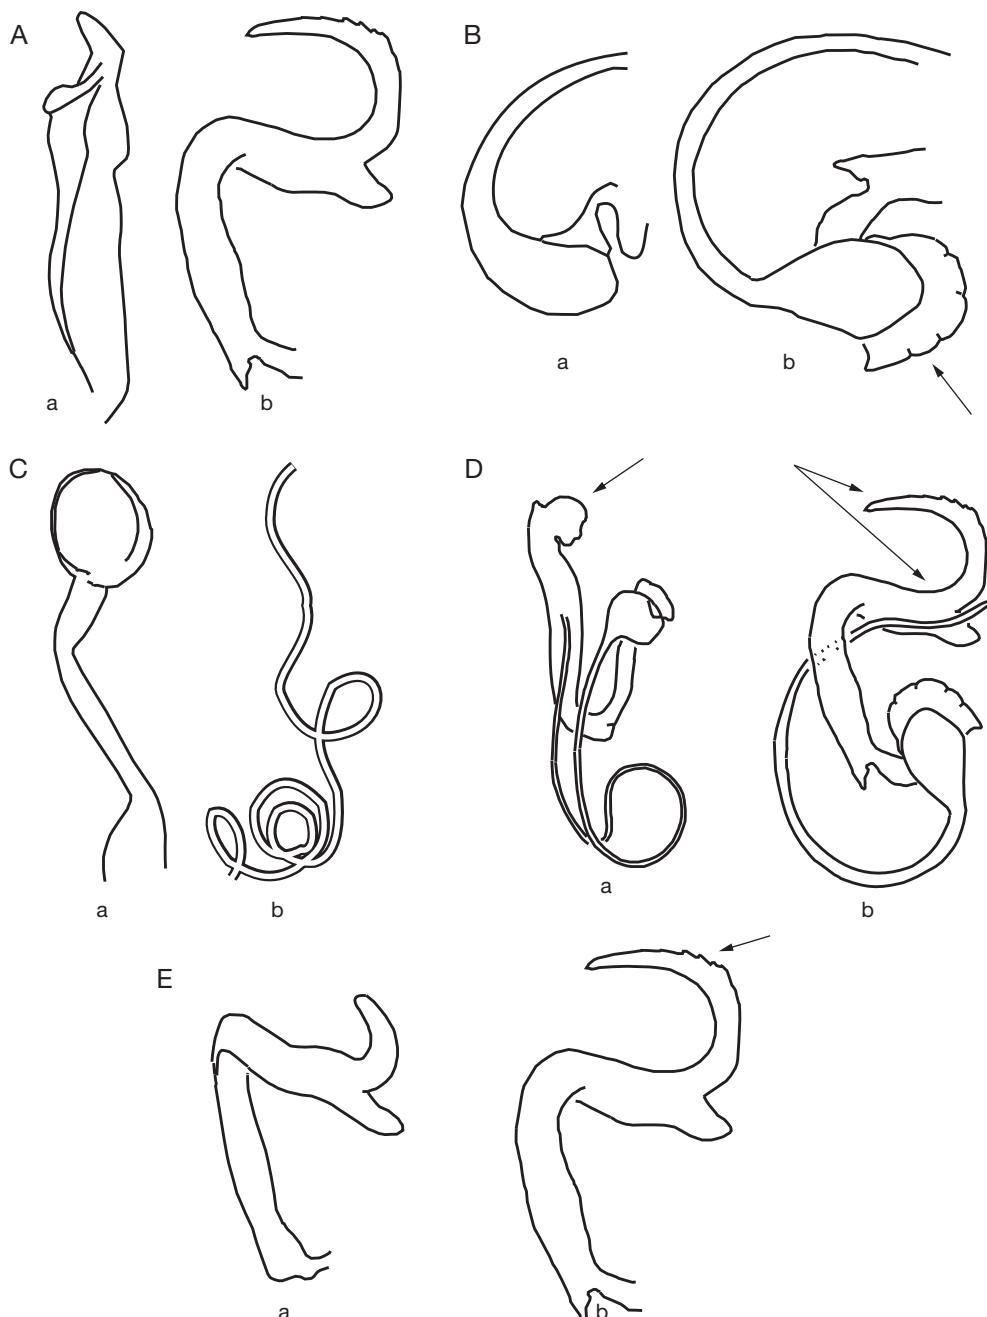

FIG. 16. — Illustration of identification key for *Cichlidogyrus* Paperna, 1960 species: **A**, shape of accessory piece (straight [a], sharply curved [b]); **B**, absence (a) or presence (b) of a penis heel; **C**, shape of the sclerotised vagina (straight and large [a], sinuous and thin [b]); **D**, shape of the accessory piece ending and of the penis (rounded and looped [a], forked and C [b]); **E**, accessory piece extremities shape and length (smooth and equal [a], rough and unequal [b]).

93. Penis with no visible heel (Fig. 16B, a) *Cichlidogyrus longipenis*
 — Penis with developed heel (Fig. 16B, b) 94

94. Straight and large vagina, penis length 70 µm (Fig. 16C, a) *Cichlidogyrus sclerosus*
 — Long, thin and sinuous vagina, penis length 145 µm (Fig. 16C, b) ... *Cichlidogyrus cirratus*

95. Accessory piece with rounded ending, looped penis (Fig. 16D, a) ... *Cichlidogyrus amieti*
 — Accessory piece forked ending, C-shaped penis (Fig. 16D, b) 96

96. Extremities of accessory piece smooth and about equal in length (Fig. 16E, a)
 *Cichlidogyrus cubitus*
 — Extremities of accessory piece highly unequal in length, the longer one with rough patch
 on its convex face (Fig. 16E, b) *Cichlidogyrus loupiaysani*
